## Thank you for purchasing a Farmet machine. Thank you also for your trust, which is inspiring and binding for us.

Farmet a.s. is a dynamically developing Czech company engaged in the development, production, sale and service of agricultural machinery for tillage, fertilizer application and sowing, as well as technologies for the processing of oilseeds, vegetable oils and feed production.

The Farmet brand is focused on products of high quality and high utility value with use in productive agricultural and processing operations. Farmet is a partner of modern agriculture and food industry in many markets around the world.

Our own products and technologies are created in close cooperation between Farmet specialists and end customers, research institutions and universities, which is why our products often have unique technical solutions according to the requirements of agricultural practice.

Significant investments in development and modern production operations are a guarantee of further development in the field of quality and new productive production technologies. Our goal is to further increase the added value of products and strengthen their competitiveness in all markets, increase user comfort, occupational safety and environmental protection.

Ing. Karel Žďárský CEO and Chairman of the Board of Directors

## 2 Quick start

| Point | Act  | Page |  |  |
|-------|--|------|--|--|
| 0     | Safety notice.   | 10   |  |  |
| 1     | Engage the Falcon with towing equipment.                                 | 11   |  |  |
| 2     | Connect all hydraulic hoses, including the return drain.                 | 17   |  |  |
| 3     | Connect the 7-pin cable of the machine's road lights.                    |      |  |  |
| 4     | Connect the machine electronics to the towing of vehicle .               | 19   |  |  |
| 5     | Raise the front support leg of the machine and secure.                   |      |  |  |
| 6     | Unlock the front section tilt pins.                                      | 33   |  |  |
| 7     | Open the tilt valve. (blue marker)                                       | 33   |  |  |
| 8     | Open the front preparation section lift valve.(yellow marker)            | 89   |  |  |
| 9     | Switch on the seed drill terminal with main switch.                      |      |  |  |
| 10    | Unfold the machine using the hydraulic circuit and the control terminal. | 33   |  |  |
| 11    | Check that the seed drill is clean.                                      | 57   |  |  |
| 12    | Check the squeegee for leaks in the seed drill.                          | 57   |  |  |
| 13    | Check the permeability of the fertilizer hoses.                          |      |  |  |
| 14    | Check the permeability of the seed hoses.                                |      |  |  |
| 15    | Sprinkle the seed.   | 39   |  |  |
| 16    | Pour the fertilizer.   | 39   |  |  |
| 17    | Adjust the machine plane and lock the tractor arms.                      |      |  |  |
| 18    | Adjust the sowing depth.   | 67   |  |  |
| 19    | Set the pressure on the pressure reducing valve.                         | 69   |  |  |
| 20    | Depth adjustment of the front preparation section.                       | 89   |  |  |
| 21    | Perform a seed test.   | 62   |  |  |
| 25    | Set the priority on the hydraulic circle of the fan.                     | 17   |  |  |
| 26    | Set the required oil flow for the fertilizer hydraulic motor.            | 17   |  |  |
| 27    | Set the fan speed according to the seed and the rate.                    |      |  |  |
| 28    | Set the required hydraulic functions – markers, tramline markers, etc.   | 37   |  |  |

## 3 Technical parameters

|                                      | Parameters                                 | FALCON 3                 | FALCON 4                 | FALCON 6                 | FALCON 8                 |

\* The actual tensile force can change significantly. Depending on the selected machine variant, depth of cultivation, soil conditions, slope of the land, wear of working bodies sand their adjustment.

\*\* The weight of the machine varies depending on the equipment.

\*\*\* Alternative hydraulic brake/ operating pressure 130±5 bar.

\*\*\*\* According to the equipment of the machine.

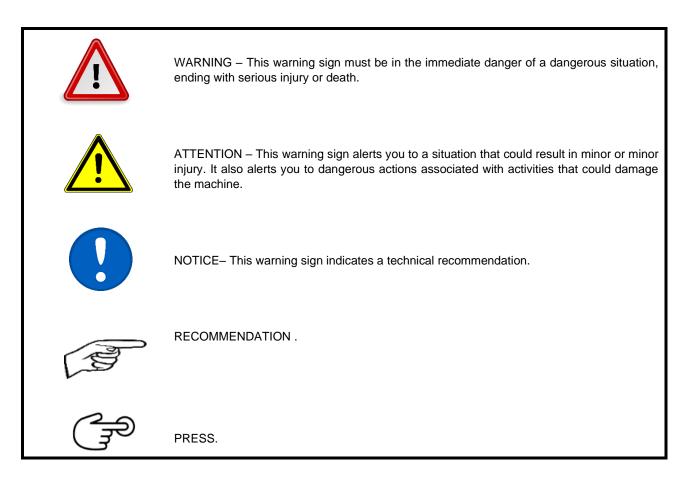

Transport/Brake system: Observe the national regulations applicable to the transport of machines on public roads. Check the legal regulations in force in the country and the regulations on the maximum permissible gross weights and axle loads, as well ass on the necessary use of the brake system. If you have further questions, please contact our sale representative.

### 4 General instructions for use

- 1. <sup>(x)</sup> The machine is manufactured in accordance with the latest state of technology and approved safety regulations. Even that, there is a risk of injury to the user or third parties or damage to the machine or other property damage.
- 2. <sup>(xx)</sup> Use the machine only in harmless condition, in accordance with its intended use, with knowledge, with knowledge of possible dangers and in compliance with the safety instructions in these operating instructions. The manufacturer is not responsible for damage caused by using the machine in violation of the machine's limit parameters and the instructions for using the machine. The risk is born by user.

Immediately remove defects, that can negatively effect safety risk.

- 3. The machine may be operated by a person authorized by the operator under the following conditions:
  - Must have a valid driving license of the relevant category.
  - They must be demonstrably acquainted with the safety regulations for working with the machine.
  - He must be familiar with the machine instructions and the machine operator.
  - They must know the meaning of the safety signs placed on the machine. Respecting them is important for safe and reliable operation of the machine.
- 4. Maintenance and service repairs on the machine may only be performed by a person:
  - Authorized by the operator.
  - Demonstrably aguainted with the safety regulations for working with the machine.
  - When repairing a machine attached to tractor has to have the right category of driver license.
- 5. The operator of the machine must be sure of other persons safety when working with the machine or transporting the machine.
- 6. When transporting the machine or working on the field the machine operator have to control the machine from inside the cabin.

- 7. The machine operator can only enter the machine structure only at standstill position and when the machine is blocked from movement for the following reasons:
  - Adjustments of working parts of the machine,
  - Repair and maintenance of the machine,
  - Unlock or secure the axle ball valves,
  - Securing the axle ball valves before lowering the side frames,
  - Adjustment working parts of the machine after folding side frames.
- 8. <sup>(xxx)</sup> When climbing on the machine don't step on tires of the pneumatic roller or other spinning parts. They can spin and you can fall and have serious injuries.
- 9. However, the changes are, or adjustments on the machine can be done only with written agreement of the manufacturer. The manufacturer is not responsible for any damage resulting from non-compliance with this instruction. The machine must be maintained with the prescribed accessories, equipment and facilities, including safety markings. All warning and safety signs must be legible at all times and in place. In case of damage or loss the marks must be immediately renewed.
- 10. When working with machine the operator must have the Manual of using with requirements of safety work available.
- 11. The operator cannot using the alcohol when working with machine, or pills, or narcotics and halucinating substances, which they increased lower attention and coordinated abilities. If the operator must consume a pills prescribed by a doctor or consuming free pills for sale must be informed by a doctor that in these circumstances is capable to work responsibly and safely operate the machine.

#### 4.1 Safety tools

For operation and maintenance:

Tight-fitting clothes

 Safety gloves and safety glasses for dust protection and sharp parts of the machine.

#### 5 Transporting machine by means of transport

- 1. The means of transport designed to transport of the machine must have a load of capacity at least equal to the weight of the transported machine. The total weight of the machine is listed on the nameplate.
- 2. The dimensions of the transported machine including the means of transport must meet with the valid regulations for operation on roads (decrees, laws).
- 3. The transported machine must always be attached to the vehicle in such a way that it cannot be released spontaneously.
- 4. The carrier is responsible for damage causes of an incorrectly or insufficiently attached machine to the vehicle.

### 6 Handling the machine with transport equipment

- 1. Lifting equipment and binding instruments using for manipulation with the machine must have its own load capacity minimum equal with weight of the machine being handled.
- 2. Attachment of the machine for manipulation may only be carried out in places designed for this purpose and marked with self-adhesive labels showing the "chain".
- 3. After attachment (suspension) in places designated for this purpose, it is forbidden to move in the area of possible reach of the manipulated machine.

## **tarmet**

### 7 Transport of the machine on public roads

- The machine attached to the rear arms of tractor (TBZ 3).
- The side frames must be folded down to a vertical position and secured.
- The machine must be equipped by removable rails with markable contours, functional lightnings and rear marking plate for slow vehicle (according to EHK NO.69).
- The lightning must be on public roads ready to operate.
- A tractor must be equipped by a special lightning system of orange colour, which must operate on public roads and be put into operation.
- The operator with respect on the measurements of the machine have to be careful and considered on the others drivers on the public roads.
- The operator must be sure to secure rear arms TBZ of the tractor and put them in secure position when transporting the machine on public roads. At the same time the arms of the rear TBZ tractor must be secured against lateral swing.
- It is strictly forbidden to transport people or cargo on the machine or to attach other machine, trailer or attachments to the machine.
- Maximum transport speed limit on public roads is **30 km/hour**.
- Prohibition of operation in reduced visibility!

The machine can be operated on roads only if it is equipped with air brakes (the customer will receive a technical certificate). Otherwise, the machine must not be operated on public roads!

## 8 Working safety labels

Safety warning labels are used to protect operator.

In general:

- 1. Strictly observe the safety warning labels.
- 2. All safety instructions also apply to other users.

3. If the Safety label on the machine is damaged or destroyed, the OPERATOR MUST REPLACE THIS LABEL WITH A NEW!

The position, appearance and the exact meaning of the occupational safety labels on the machine are determined in the following tables.

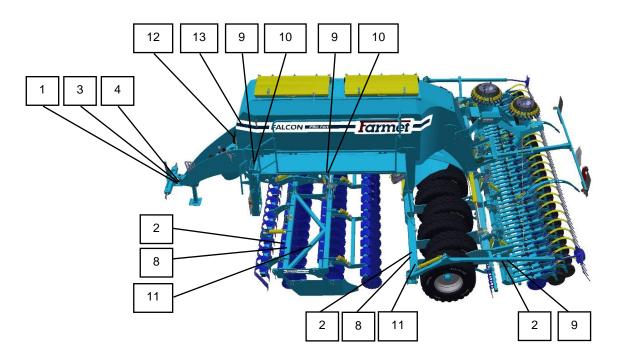

Table 2 – self-adhesive safety warning labels are located on the machine.

| Positions<br>on the<br>machine | Safety label | Meaning of labels   | Label stickers |
|--------------------------------|--------------|---|----------------|
| 1                              |              | Before the manipulation with the machine<br>ready the instructions for using.<br>When operating, follow the instructions and<br>safety regulations for operating the machine.                   | P1H            |
| 2                              |              | Driving and transporting the machine structure is strictly forbidden.   | P 37 H         |

| 10 | Targets with road lighting                  | 20 | Flexi board                                 |

### 10 Putting the machine into operation

- Before taking over the machine, check and control that it has not been damaged during transport and that all the parts contained in the delivery note have been delivered.
- Before putting the machine into operation read these operating instructions carefully. Before using the machine for the first time be familiar with yourself with controls and overall instructions.
- The machine showing signs of damage must not be put into operation.
- The operator is responsible for safety and for all damages caused by operation of the tractor and the connected machine.
- The machine may only be connected to a tractor whose curb weight is equal to or higher than the total weight of the connected machine.

#### 10.1 Aggregation of a machine with a tractor

| Tractor engine power requirement for the ma                             | achine FALCON 3  | 90 kW*  |
|---|--|---|
| Tractor engine power requirement for the ma                             | 117 kW*  |   |
| Tractor engine power requirement for the ma                             | 161 kW*  |   |
| Tractor engine power requirement for the ma                             | 205 kW*  |   |
|   | Spacing of lower suspension joints                                 | 1010±1,5 mm,  |
| Requirement for TBZ tractor   | (measured on joint axels)  | (can also be set 910±1,5 mm)  |
|   | Ø Holes for lower suspension joints for<br>machine suspension pins |   |
|   | Electrical distributor circuit                                     | Circuit pressure min.190 bar –<br>max.230 bar   |
|   | Electrical distributor circuit                                     | 60 l/min., 2 pcs of quick coupling sockets ISO 12,5   |
|   |  | Pressure in the filling branch min.130<br>bar–max.230 bar, 1 pc of quick<br>coupler socket ISO 12,5 |
| Tractor hydraulic system requirement                                    | Hydraulic drive circuit  | Pressure in the waste branch max.5<br>bar, 1pc of quick coupler socket ISO<br>20                    |
|   | Seed pressure  | Circuit pressure min.190 bar –<br>max.230   |
|   | Lifting and lowering circuit of the                                | Circuit pressure min.190 bar –<br>max.230   |
|   | preparation section  | 40 l/min., 2pcs of quick coupling sockets ISO 12,5  |
| Tractor air system requirement (if the machine is equipped with brakes) | Machine axle braking circuit                                       | Circuit pressure min.6 bar – max. 15<br>bar   |
|   |  | 12 V / 40 A   |
| Tractor electrical system requirement                                   | Connection of the electronic system of the machine                 | + red - black   |

No persons may be present in the are between tractor and the machine during connecting.

#### 10.2 Machine hydraulics connection

- Only connect the hydraulic hoses of the machine when the hydraulic circuits of the machine and the tractor (unit) are depressurized.
- The hydraulic system is under high pressure.
- Regularly check all lines, hoses and fittings for leaks and obvious damage. Eliminate any defects immediately.
- When searching for and removing leaks, use only suitable aids, protective goggles and gloves are the basis.
- Use the plugs (on the machine) and sockets (on the tractor) of quick couplings of the same type to connect the machine hydraulic system to the tractor. Connect the quick couplings of the machine to the hydraulic circuits of the tractor according to the table below.

| Circle                 | Plug     | Circuit color       | Function  | Oil flow I/min | Constant flow |
|------------------------|----------|---------------------|-----------|----------------|---------------|
| Return waste<br>branch | ISO 20   | 0                   | Free fall | 0              |               |
| Hydraulic              | ISO 12,5 | 00                  | Pressure  | MAX            |               |
| switchboard            | ISO 12,5 | 0                   | Reverse   | MAX            |               |
| Preparation            | ISO 12,5 | 00                  | Pressure  | 20-40          |               |
| section                | ISO 12,5 | 0                   | Reverse   | 20-40          |               |
| Florida and            | ISO 12,5 | $\bigcirc \bigcirc$ | Pressure  | 15-20          |               |
| Flexi board            | ISO 12,5 | $\bigcirc$          | Reverse   | 15-20          |               |
| Fan                    | ISO 12,5 | 0                   | Pressure  | 20-40          | $\checkmark$  |
| Fertilizing            | ISO 12,5 | 0                   | Pressure  | 15-20          | $\checkmark$  |
| Microdrill             | ISO 12,5 | 0                   | Pressure  | 15-20          | $\checkmark$  |

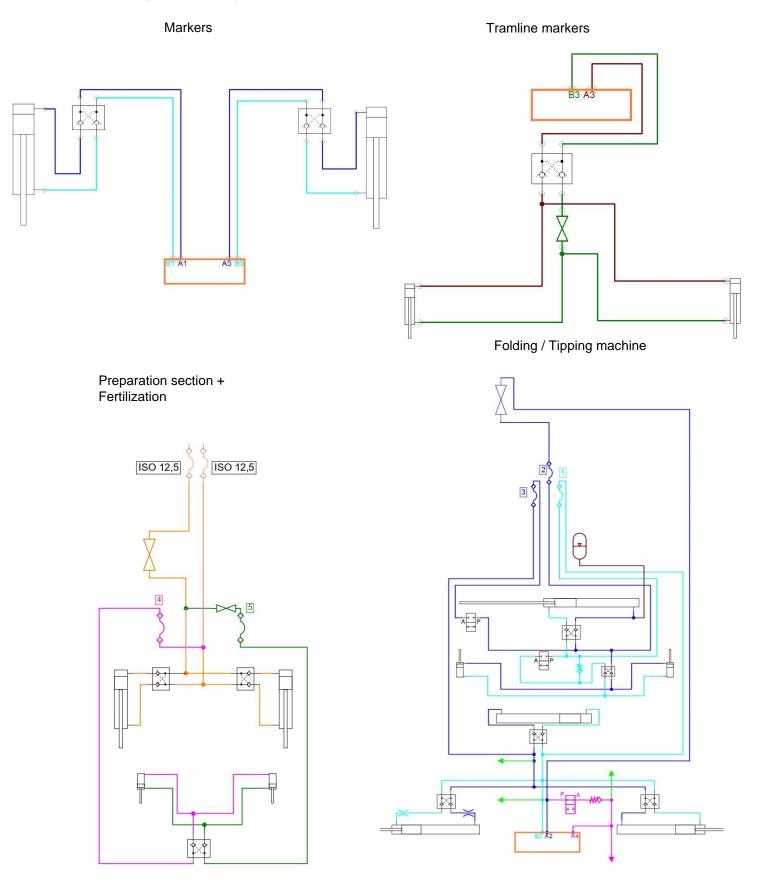

To prevent involuntary or any stranger mistaken hydraulics movement, the control cabinets on the tractor must be secured or locked when not in use or in the transport position.

It is forbidden to disassemble parts of the machine hydraulic system that are under pressure. Hydraulic oil that penetrates the skin under high pressure causes of injury, seek medical advice immediately.

## 10.3 Hydraulic diagram of the machine

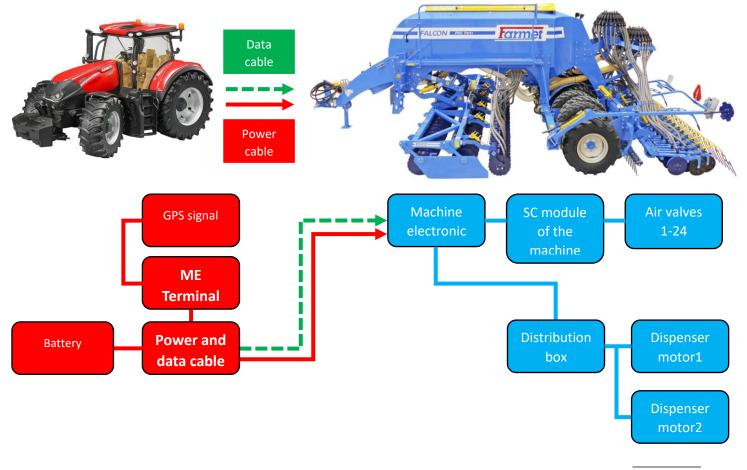

## **farmet**

#### 10.4 **Connection of the electronic part of the machine**

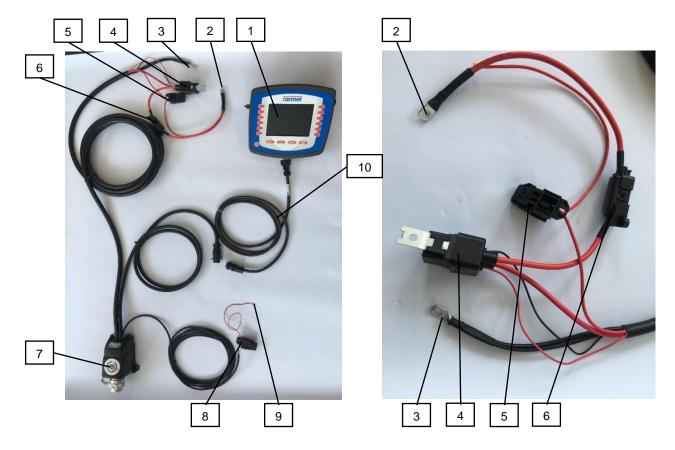

- 1) Connection to the tractor battery + Müller terminal (10.4.1)
- 2) Machine connection via ISOBUS tractor socket + Müller terminal (10.4.2)
- 3) Machine connection via ISOBUS tractor socket + Tractor terminal (10.4.3)

#### 10.4.1 Connection to tractor battery + Müller terminal

- The electronic unit of the machine only connect when the tractor is at standstill, secured against movement and against the intervention of strangers.
- Use the power cord supplied with the machine to connect the electronic unit. The connecting cable must be connected directly to the tractor battery!
- Place the terminal in the tractor in a place where it will not obstruct the driver's view and at the same time be in the operator's field of vision.
- Secure the wiring securely to prevent mechanical or thermal damage.
- To connection cable set contains a voltage relay, which is switched by a cable that is ideally attached to the ignition of the tractor, or to 12 V switched. This relay switches the communication between the machine control unit and the terminal.
- If welding is required on the machine or tractor disconnect the unit from the power supply and disconnect the connecting cables.
- Never replace the fuse with another object and always replace it with a fuse with the same fuse when replacing it.

| 1 | Terminal                  | 6  | Fuse 50 A                            |
|---|---------------------------|----|--------------------------------------|
| 2 | Positive battery pole "+" | 7  | ISO socket                           |
| 3 | Negative battery pole "-" | 8  | Fuse 1 A                             |
| 4 | Voltage relay             | 9  | Ignition contact for relay switching |
| 5 | Fuse 15 A                 | 10 | Terminal connection cable            |

Due the disconnection of the unit from the battery, it is necessary to connect the ignition contact for closing the relay (9) to the ignition of the tractor, or to the switched 12 V (voltage 12 V switched by the key or switch).

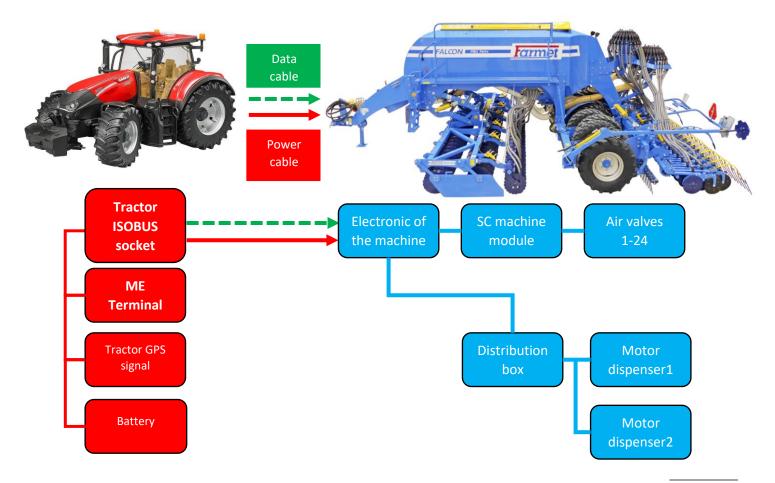

#### 10.4.2 Connecting the machine via the ISOBUS socket of the tractor + Müller terminal

- Connect the machine plug to the ISOBUS socket of the tractor.
- Use the reduction cable of the terminal and connect to the IN-CAB socket of the tractor and connect the terminal.
- For this use it is necessary to set the terminal as VT1, you can read this in the chapter <u>VT a TC settings</u> page 23.

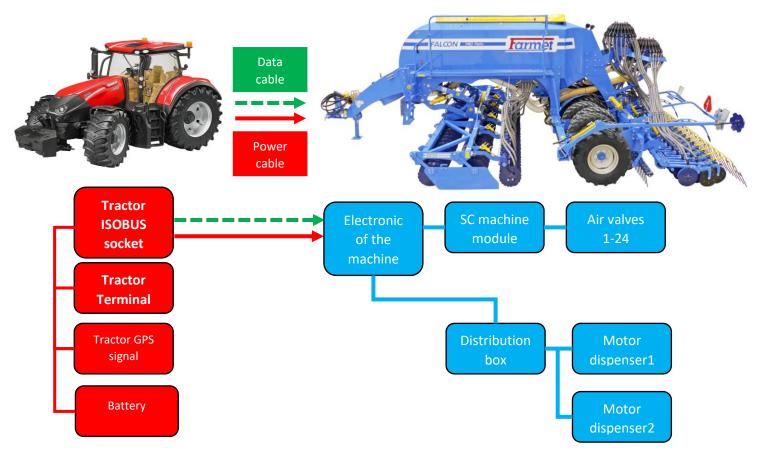

#### 10.4.3 Connecting the machine via the tractor's ISOBUS socket + Tractor terminal

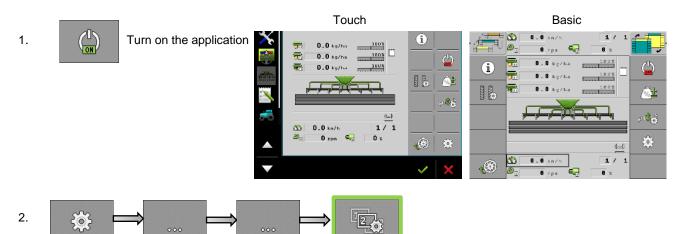

- Connect the machine plug to the tractor socket.
- ISOBUS VT must be switched on in the tractor settings.
- The machine application is loaded in the tractor ISOBUS application after 2-5 minutes (communication between the tractor and the machine must take place first).

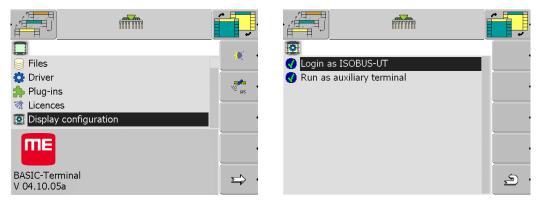

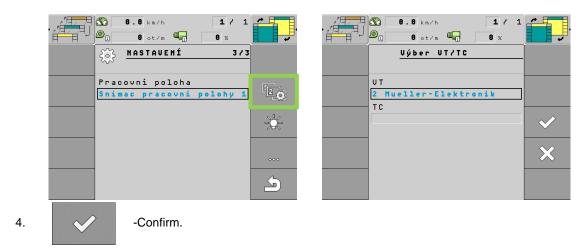

#### 10.4.4 Selecting and setting up the virtual terminal (VT) and task manager (TC)

- Select which virtual terminal you want to use (VT), for example Mueller or another terminal.
- For the basic terminal, it is necessary to select in the settings that it also work as a secondary terminal.

3. Select which task manager you want to use (TC), such as Mueller or other terminal.

- Settings of virtual terminal and task manager is complete.

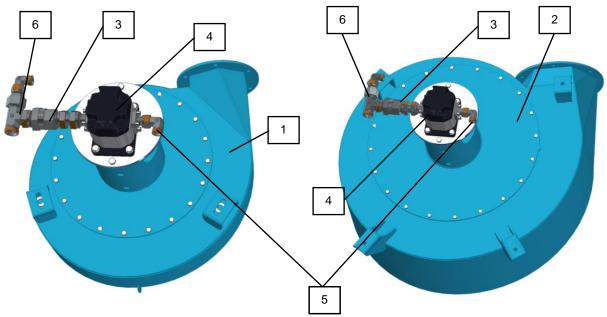

## 11 Machine fan

- The hydraulic drive of the fan is driven directly from the tractor switchboard.
- It is necessary that the fan drive is connected to the tractor's priority circuit to ensure that the fan speed does not drop in any sense.
- The fan speed is set directly in the tractor by regulating the oil flow of the circuit.

- Replacing of the quick coupling for the waste branch with less than ISO 20 is unacceptable.

\*See page 3 for your machine configuration.

| 1 | Small fan V1           | 4 | Hydraulic motor                |
|---|------------------------|---|--------------------------------|
| 2 | Big fan <b>V2</b>      | 5 | Pressure hose ISO 12,5 (P)     |
| 3 | Reverse throttle valve | 6 | Return waste branch ISO 20 (T) |

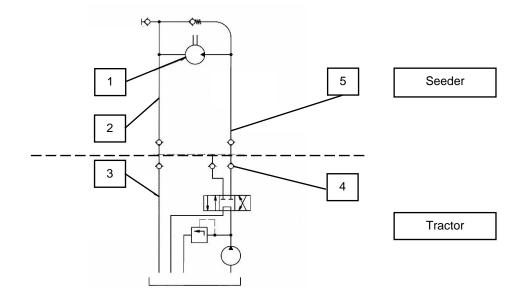

|  | Hydraulic engine capacity             | aulic engine capacity per revolution |                   |
|--|---------------------------------------|--------------------------------------|-------------------|
|  | Big fan                               | Maximum speed                        | 4000 (rev. /min.) |
| Hydraulic fan motor                    |                                       | Minimum speed                        | 1000 (rev. /min.) |
|  | Small fan                             | Maximum speed                        | 5500 (rev. /min.) |
|  |                                       | Minimum speed                        | 1000 (rev. /min.) |
| Brossuro branch (B)                    | Minimum pressure in the pressure hose |                                      | 130 (bar)         |
| Pressure branch (P) Maximum pressure f |                                       | n the pressure hose                  | 50 (l/min.)       |
| Return waste branch (T)                | Maximum pressure in the               | return waste branch                  | 5 (bar)           |

In case, if free waste is not fitted to the tank as standard on the tractor, contact the tractor manufacturer (dealer), who will provide you with information on the options for the free waste terminal.

- Hydraulic connection of the fan drive

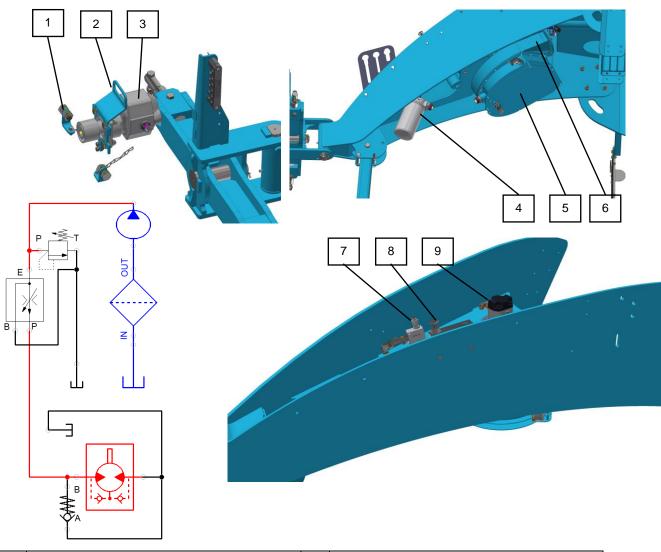

| 1 | Fan hydraulic motor            | 4 | Quick coupler of tractor switchboard |
|---|--------------------------------|---|--------------------------------------|
| 2 | Waste branch ISO 20 (T)        | 5 | Pressure hose ISO 12,5 (P)           |
| 3 | Free waste in the tractor tank |   |                                      |

Farmet a.s. is not liable for damage to the hydraulic drive or tractor caused by incorrect connection of the hydraulic drive.

### 11.1 Fan with separate drive on PTO

| 1 | Generator locking screw | 6 | Ventilator               |
|---|-------------------------|---|--------------------------|
| 2 | Handling handle         | 7 | Safety valve             |
| 3 | Hydraulic generator     | 8 | Fan speed reducing valve |
| 4 | Low pressure oil filter | 9 | Hydraulic fan motor      |
| 5 | Oil tank                |   |                          |

Securing the hydraulic generator against rotation with chains.

#### Methods to set the fan speed:

- 1. Connect the hydraulic generator (3) to the tractor PTO.
- 2. Set the working speed on the tractor (540 rev. /min.).
- 3. Use the reducing valve (8) to set the required fan speed.
- 4. Check the speed on the machine monitor.

### 11.2 Fan speed setting according to seed

\*See page 3 for your machine configuration.

|        |      |      |        | V1      |              |  |

## 11.3 Fertilizing air control valve

- The position of lever 1 can be used to set the amount of air that flows into each branch.
- Position 2 means that the air flow to the branch is fully closed.
- Position 3 means that the air flow to the branch is fully open.

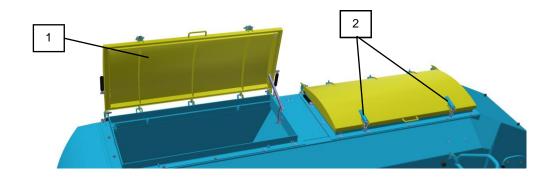

| 1 | Valve locking pin | 3 | Maximum valve opening |
|---|-------------------|---|-----------------------|
| 2 | Closed valve      |   |                       |

### 12 Pressure system of the machine

It is necessary to check the leakage of compressed air, especially around the tank lid.

| 1 Hopper lid | 2 | Lever to secure the hopper lid |
|--------------|---|--------------------------------|
|--------------|---|--------------------------------|

## **f**armet

### 13 Seed switching sensors

- Sowing switching is switched off and off by two sensors.
- The system is designed so that sowing is switched at the beginning of the countersinking. Before the seed passes through the entire pneumatic distribution system, the machine is recessed and it is minimalized the sowing start delay at the start of the journey.
- On the contrary, sowing is switched off at the very beginning of excavation.

#### 13.1 Sowing switching

- Switching is secured by an antenna sensor. The antenna sensor is set to close right at the beginning of the countersinking.
- If the sensor is in a horizontal position (as in the picture), it means that the machine is in the working position.
- The moment at which the sowing is switched on depends on the position of the sensor set between the seed frame and the main machine frame.

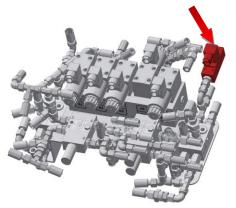

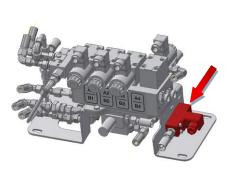

- If the seed section frame is in the upper position, the sensor must be in the closed position.

#### 13.2 Sowing off

- The sowing is switched off by a pressure sensor, which is located on the hydraulic circuit for raising the seed section.
- The sensitivity of this sensor is set to a pressure of 100 Bar.
- When excavating the machine, oil pressure is supplied to the hydraulic distributor, when the set value is reached, the switch is closed and the motors of the seed and fertilizer metering units are deactivated.
- For this reason, move the hydraulic control lever to the float position after deepening the machine into the working position.
  - The sensitivity of the pressure and antenna sensor is set by the manufacturer as standard. Settings may only be changed by a specialist.

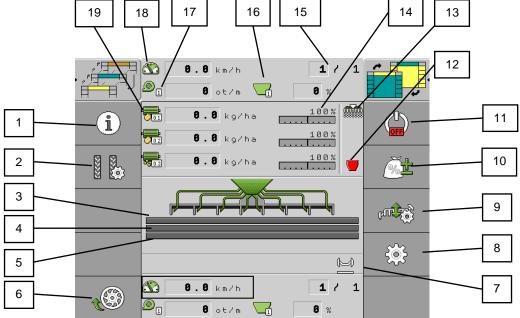

## **farmet**

### 14 Electronic machine control Müller Electronic

- The electronic system controls all functions that are connected to the blue hydraulic circuit.

#### 14.1 Work screen

\*All icons on the terminal side are function keys (two-column image).

#### 14.2 Information

1. On the work screen.

| Function icon | Meaning                      |  |  |  |
|---------------|------------------------------|--|--|--|
|               | Resetting the daily counter. |  |  |  |
| ΣΞ            | Counter summary information. |  |  |  |
|               | Task list (TASK).            |  |  |  |
|               | Total stack counter.         |  |  |  |

- Area The area on which the machine was in the working position.
- **Quantity** Applied amount.
- Area performance Applied area per hour.
- 2.

- Counter summary information.

- **Operating hours** Period time for which the computer is turned on.
- Total hours Period time, which the machine was working for.
- **Total distance** Worked distance.
- Total area Worked area.
- Area performance Applied area per hour.

#### 14.3 Creating a task with a computer

- This function allows you to create an order, for an overview of information about the work performed.
- 1. On the working screen.

ΣΞ

- Order Select an existing one or create a new task.
- **Rename** Here you can name the order.
- Product Here we assign the product (MOTOR / SEED / FERT).
- 2. After the end of contract.

3. It is possible to reset the counter.

#### 14.4 Remaining calculated amount in the hopper

- On the screen Results / The hopper will see counters that show the amount remaining in the hopper and how much work can still be done with the remaining contents of the hopper.
- 1. On the working screen .

- Leftover amount Remaining sum in the hopper.
- Leftover area Area where you can still work with the remaining sum in the hopper.
- Leftover track The distance that can still be traveled with the remaining sum in the hopper.

Use to return to the work screen.

#### 14.5 Unfolding and folding the machine

- The blue hydraulic circuit of the machine must be connected to the double-acting hydraulic circuit of the tractor.

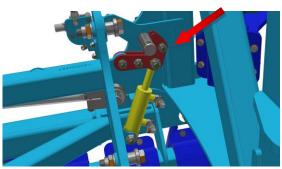

- The operator must ensure that when folding or unfolding the side frames, no person or animal is within their reach (means at the point of impact) or in the near area and that no one pushes their fingers or other parts of the body into the joint space.
- Folding or unfolding the machine at rest, on level and standstill surfaces.
- Remove adhering dirt on the folding frames, especially around the joints, end valves, stops and secured sections. The dirt can prevent folding, unfolding or mechanical damage.
- While folding and unfolding, check the side frames and let them smoothly to the end of position.

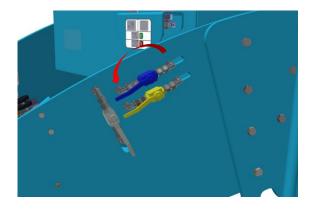

#### 14.5.1 Unfolding the machine

1. Before unfolding the machine it is necessary to unlock the side frames on the front preparation section. This locking is hydraulic (unlocks automatically).

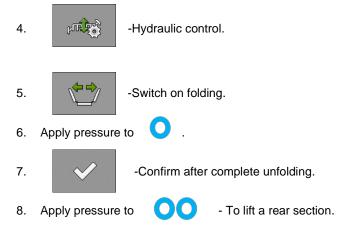

HYDRAULIC SECURITY

2. Opening the blue ball valve (It must remain open during work).

3. All sections of the machine must be in the raised position (antenna sensor closed).

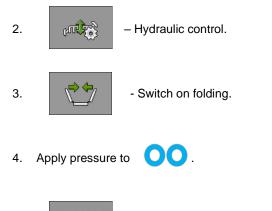

#### 14.5.2 Folding the machine

1. The machine must be in the upper position (antenna sensor closed).

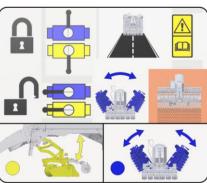

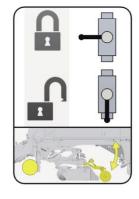

-Confirm after complete folding.

6. Closing the blue ball valve.

5.

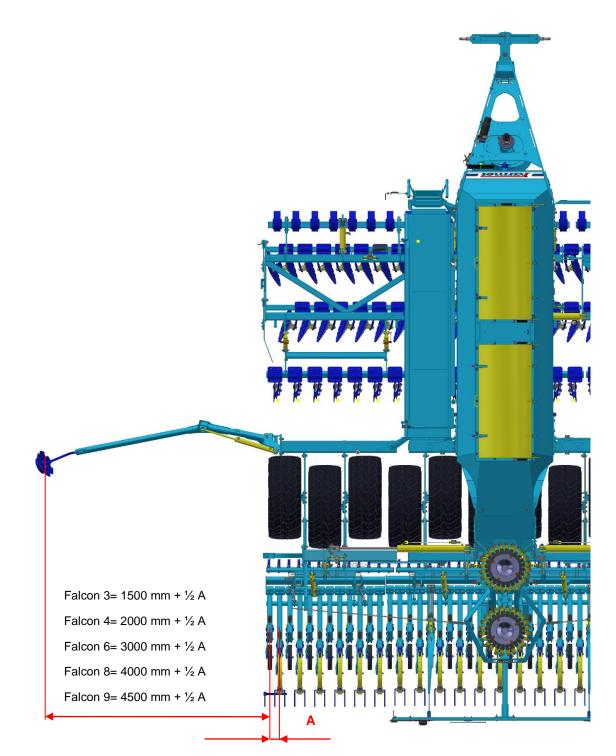

### 14.6 Control and settings of the markers

- The markers are adjustable only to the center of the tractor, they copy the terrain, each track marker can be controlled separately and they are hydraulically tiltable.
- The distance of engagement of the marker disc is always measured from the center of the seed coulter. The markers must be set to the correct length in the field.

The markers are only activated when the machine is in the working position.

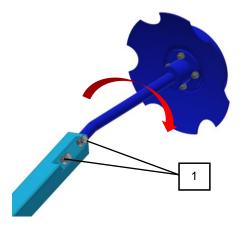

## 14.6.1 Settings of aggressivity of the markers

- Adjust the aggressivity of the markers depending on the soil conditions.
- 1. Loosen the hexagonal screws (1).

| 1 | Hexagonal safety screws |
|---|-------------------------|

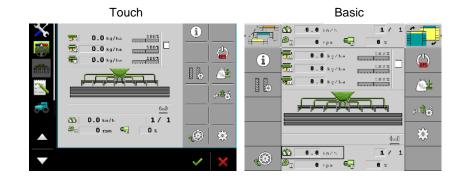

- 2. Adjust the marker and retighten the hexagonal screws.
- 3. Check the quality of the work of the markers and adjust the marker settings if necessary.

#### 14.6.2 The markers control

Turn on the application

- The markers control.

| Function icon | Meaning  |
|---------------|--|
|               | Control of the left marker only.   |
|               | Deactivate marker control.   |
|               | Obstacle function- the hydraulics only control the marker without the rear sowing section. |
|               | Control of both markers at the same time.  |
|               | Control of the right marker only.  |
|               | Automatic change of the marker when the seeding section is raised.                         |
|               | Manual marker change in automatic mode.  |

4. After selecting the function, apply pressure to

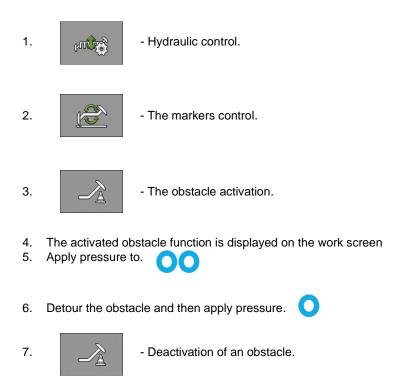

The markers are controlled by a blue hydraulic circuit at the same time as the sowing section.

# **farmet**

## 14.6.3 Obstacle function

- If the obstacle function is activated, the hydraulic circuit only controls the markers and the sowing section is still in the working position.

## 14.6.4 Swamp function

- The swamp function is used to raise the sowing section, without cancelling the sowing.
- 1. The machine must be in working position

- Activate function swamp.

4. The activated swamp function is displayed on the work screen.

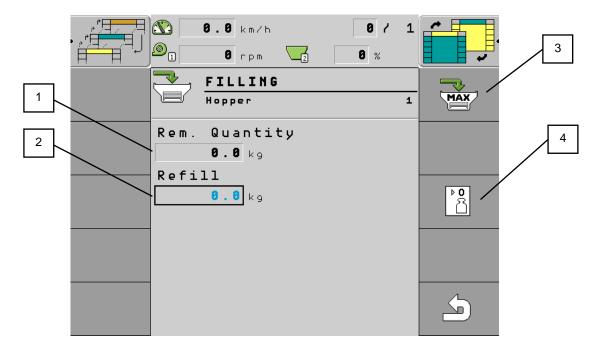

- 5. Apply pressure to, OO sowing section is lifting but the machine is still working.
- 6. Apply pressure to, **O** sowing section is deepens.
- 7.
  - Deactivation of the swamp function.

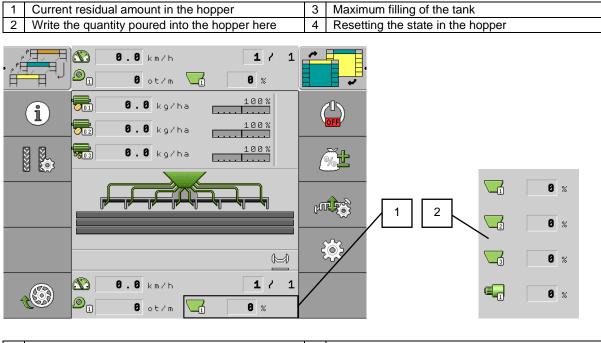

# 14.7 Enter the hopper fill

- The system allows the calculation of the tank status in real time, based on a calibration test. This function is not necessary for the correct operation of the machine.

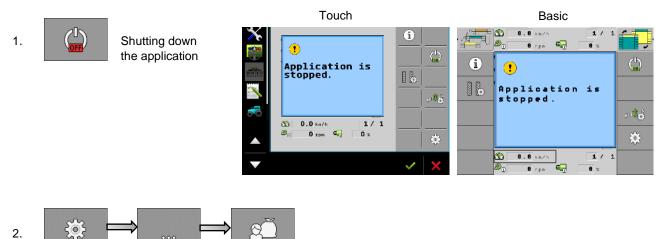

| 1 | Hopper 1 status indicator in % based on sowing | 2 | Open menu of real-time values (choose which |
|---|--|---|---|
|   | test   | 2 | ones I currently want to display)           |

## 14.8 User product database

#### Product

- Here I choose which motor I want to modify (motor 1,2,3, or Seed / Fertilizer) according to the machine configuration.

#### Rename

- Here you can rename the product.

#### Type of product

- For the engine, select the product type seed / solid fertilizer / liquid fertilizer / undefined.

#### Note

Here you can enter any note, for example MARGED.

#### Adapt

- Here it is possible to set a percentage value by which the required dose value can be changed manually during work.
  - Example: 1x press by 10 %, 2x press by 20 %

#### Gear ratio

If there is a gear behind the outlet shaft motor, it must be entered here. The motor shaft speed is entered first and then the metering unit speed.
 Example: 2 rev. motor / 1 rev. dispenser

#### Level alarm

- Low / Empty Only if two sensors are used one above the other for one dispenser.
- Empty In case of using one sensor for the dispenser.

Deactivate – To deactivate the dispenser sensor.

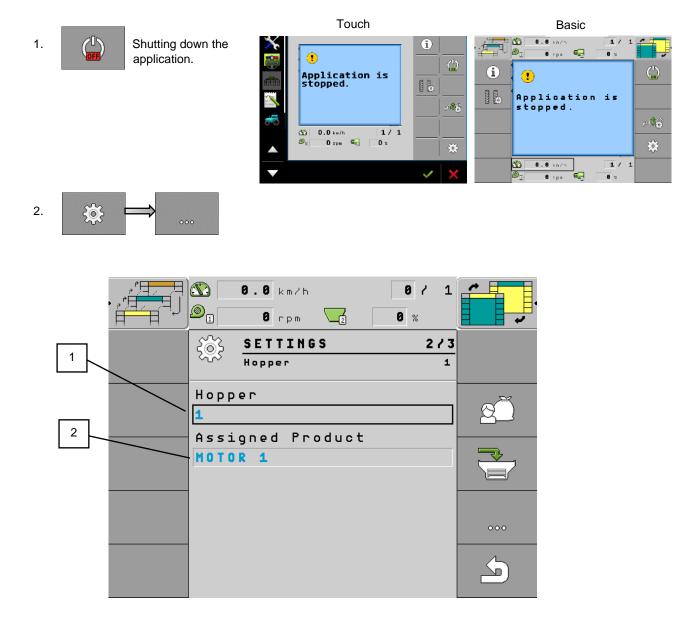

#### **Deviation tolerance**

- For each motor, enter the deviation from the required dose above which an alarm should be triggered.
- For a precision seed machine the deviation tolerance applies to each row.
- The left value applies to the upward deviation and the right value to the downward deviation.

Deviation Tolerance

# 14.9 Assignment of the motor to the given hopper

| 1 | Settings of hopper 1 / motor 1 | 2 | Assigned product from the product database |
|---|--------------------------------|---|--|

# 14.10 Activation / Deactivation dispenser

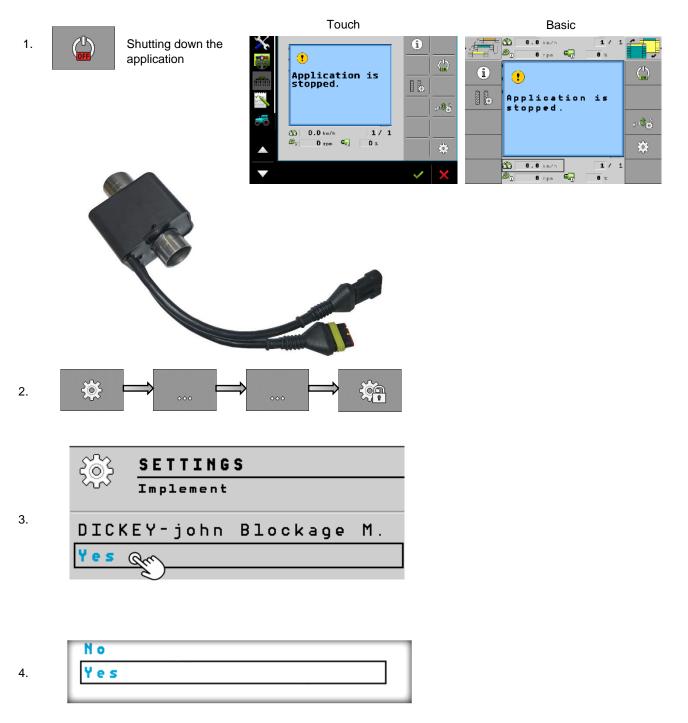

- This function is used to deactivate the metering motor, which we do not want too use during work (sowing with one metering unit, deactivation of fertilization).

- 2. Select the product (dispenser) that you want to deactivate by pressing on its name (MOTOR 1).
- 3. - Deactivation / Activation 3 1/3 SETTINGS MOTOR 1 Product MOTOR 1 Target Rate 🛛 . 🕄 kg/ha Status Activated Status Speed Deactivated max. 99.0 min. 1.5 km2h **0.0** kg/ha 100% This shows the deactivated dispenser on the desktop. 4. . . . . . . . .
- After switching the terminal off and on again, the dispenser is always reset (activated).

# 14.11 Seed flow sensing Dickey-John-deactivation

- 5. Seed flow sensing deactivated.
- 6. To reactivate the sensors, select YES.

# 15 Rail lines

- Rail lines settings.

| Functional icon | Meaning  |
|-----------------|--|
|                 | Adds driving<br>E.g.to set the number of rides correctly after returning to the field.<br>This function is only available when the machine is stopped and not                                    |
|                 | in the working position.   |
|                 | Subtract the ride.<br>E.g. To set the number of rides correctly after returning to the field.<br>This function is only available when the machine is stopped and not<br>in the working position. |
|                 | Deactivation the automatic addition of trips.<br>If the tramline counting is stopped, the machine will do the tramline continuously.   |
| N N N           | Opens the screen for setting the tramline rhythm.  |

## 15.1 Rail lines set on and off

| P 1 | 8.9 km/h         1 / 1           9         9 rpm         8 % |   |   | 0<br>20<br>1 | .0 km/h<br>0 rpm | 2      |        | 1 /<br>0 % | 1      |   |

| RhNo.               | Program number.   |
|---------------------|---|
| Length              | The period when the cycles start to repeat.   |
| Left, Right         | Specifies the travel in which the tramline on the left or right side of the machine is activated. |
| Individual settings | Here we can choose our own settings.  |

# 15.2 Steps for setting the tramline rhythm correctly

### Necessary information for calculating the rhythm of tramlines.

- 1. Seeder grip
- 2. Sprayer grip

We will perform calculation.

Result of the calculation  $= \frac{\text{Sprayer grip}}{\text{Seeder grip}}$ 

#### Possibilities of creating tramlines

- 1. Even results Even tramline rhythms (15.2.1)
- 2. Odd result Odd tramline rhythms (15.2.2)
- 3. Decimal results Special tramline rhythms (15.2.3)

#### Types of valves placement on the machine

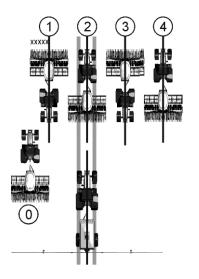

|       | <ul> <li>TYPE A</li> <li>One valve on each side of the machine.</li> </ul>   |
|-------|--|
| or or | <ul> <li>TYPE B</li> <li>One valve on one side of the machine.</li> </ul>  |
|       | <ul> <li>TYPE C</li> <li>Two valves on one side of the machine.</li> </ul>   |
|       | <ul> <li>TYPE D</li> <li>One valve on one side of the machine and two valves on the other side of the machine.</li> </ul>  |
|       | <ul> <li>TYPE E</li> <li>Two valves on each side of the machine and each side of the machine create a complete rail line for the entire sprayer (2 tracks).</li> </ul> |

# **f**armet

## 15.2.1 Even tramline rhythms

- It is possible to create an even tramline during one or two runs.
- 1. During one run, tramlines are created on both sides of the machine.
- 2. During two runs, tramlines are created, the valve is located only on one side of the machine.
- 3. During one run, tramlines are created, both valves are on one side of the machine.

Example: Creating a tramline on both sides of the machine at the same time.

- The example shows a 4s rhythm
- Rail lines are created in two runs (sprayer 12 m, seeder 3 m)
- Run 0 must be done separately.
- For run 0 trip counting must be deactivated.

Creating a tramline in one run TYPE A

| Possible valve positions | Result of the calculation | RhNo. | The<br>resulting<br>rhythm | Left valves |   | es Right valve |   |
|--------------------------|---------------------------|-------|----------------------------|-------------|---|----------------|---|
| 8-18                     | 2                         | 2s    | 2                          |             | 1 |                | 1 |
| 8-18                     | 4                         | 4s    | 4                          |             | 2 |                | 2 |

## 15.2.2 Odd rhythms of tramlines

- Odd tramline rhythms are always created in one run. Odd tramline can only be created if the valves are on both sides of the machine.

Example: Creating a tramline one in one run.

- The example shows rhythm number 5.
- The tramlines are created in the third run (sprayer 15m, seeder 3m)

#### Creating a tramline in one run TYPE A

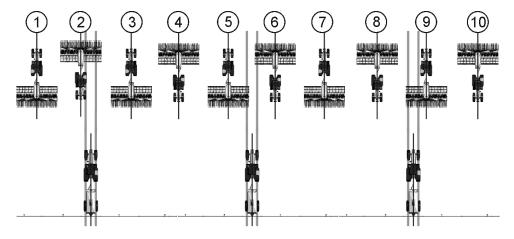

| Possible valve positions | Result of the calculation | RhNo. | The resulting rhythm | Left | Left valves |  | Right valves |  |
|--------------------------|---------------------------|-------|----------------------|------|-------------|--|--------------|--|
| 9+9                      | 3                         | 3     | 3                    |      | 2           |  | 2            |  |
| 8-18                     | 5                         | 5     | 5                    |      | 3           |  | 3            |  |
| 8-6                      | 7                         | 7     | 7                    |      | 4           |  | 4            |  |
|                          | 9                         | 9     | 9                    |      | 5           |  | 5            |  |
| 0+0                      | 11                        | 11    | 11                   |      | 6           |  | 6            |  |

## 15.2.3 Special tramline rhythms

- Special rhythms are always created during four runs, they can only be created if the tramline valves are arranged on both sides of the machine.
- One tramline valve is on one side and two valves are on the other side of the machine.

#### Example: Creating a tramline with a special rhythm.

- The example shows rhythm number 20.
- Rail lines are created during runs 2,5,6 and 9 (sprayer 20 m, seeder 6 m)

#### Start of sowing from the left side of the TYPE C/D/E field

| Possible valve positions | Result of the calculation | RhNo. | The resulting<br>rhythm | Left | valve | Right valve |   |  |
|--------------------------|---------------------------|-------|-------------------------|------|-------|-------------|---|--|
| - <b>B</b> 1,5m          | 1.33                      | 999   | 4                       | 3    | 2     | 1           | 4 |  |
|                          | 1.5                       | 22    | 6                       | 4    | 3     | 6           | 1 |  |
|                          | 2.5                       | 16    | 10                      | 7    | 4     | 9           | 2 |  |

## 15.3 The most frequently used tramline settings

The specific tramline setting is done in the tramline setting screen itself. For a better orientation and understanding of the setting of the tramlines, we present graphic and tabular processing here. The system for determining the rhythm of the tramlines follows from the graphic representation and the table.

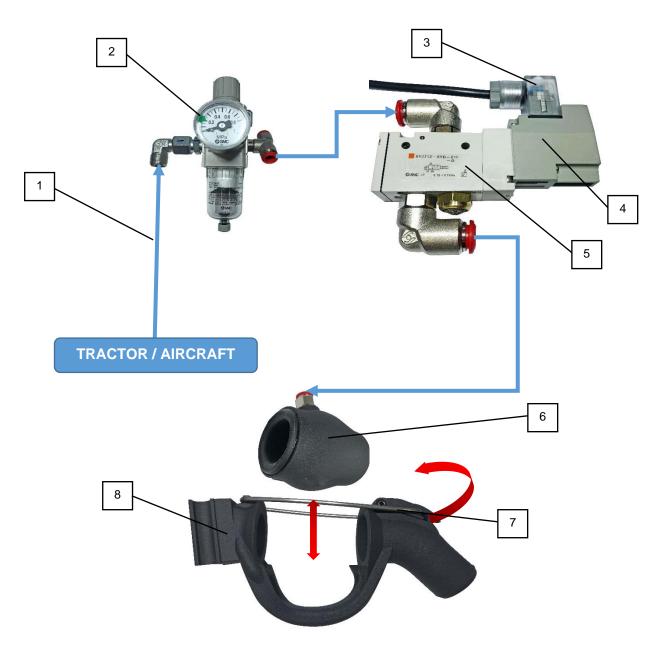

| Grip of the<br>machine (m) | Grip of the<br>sprayer (m) | Program<br>(Number of<br>line) | Number of<br>rides per<br>machine width<br>(length) | Left | Right |
|----------------------------|----------------------------|--------------------------------|---|------|-------|
| 3                          | 15                         | 5                              | 5   | 3    | 3     |
| 3                          | 21                         | 7                              | 7   | 4    | 4     |
| 3                          | 27                         | 9                              | 9   | 5    | 5     |
| 4                          | 20                         | 5                              | 5   | 3    | 3     |
| 4                          | 28                         | 7                              | 7   | 4    | 4     |
| 4                          | 36                         | 9                              | 9   | 5    | 5     |
| 6                          | 18                         | 3                              | 3   | 2    | 2     |
| 6                          | 30                         | 5                              | 5   | 3    | 3     |
| 6                          | 42                         | 7                              | 7   | 4    | 4     |
| 8                          | 24                         | 3                              | 3   | 2    | 2     |
| 8                          | 40                         | 5                              | 5   | 3    | 3     |

## 15.4 Rail line valves

- The tramline valves are closed with compressed air. It is necessary to have a red air hose connected to the compressed air connection from the tractor.
- For valves, it is important that no pressure escapes anywhere in the entire system.
- The pressure reducing valve must be set to 0,2 MPA.
- Check the valve drip tray.
- When the valve is running, the red signal light on the switchboard must always be on.

| 1 | Compressed air supply from the tractor | 5 | Air distributor            |
|---|--|---|----------------------------|
| 2 | Air pressure reducing valve            | 6 | Air valve                  |
| 3 | Connector with red signal light        | 7 | Secure locking lever valve |
| 4 | Switchboard solenoid                   | 8 | Body of air valve          |

#### 15.5 Air pressure reducing valve of the tramlines

- -The air pressure reducing valve is located on the seed drill head holder.
- 1. Slide out (upwards) the valve adjustment segment.
- Tighten to add pressure.
   Release to reduce pressure.
- 4. After setting the required pressure of 0,2 MPA, slide in the adjusting segment (downwards).

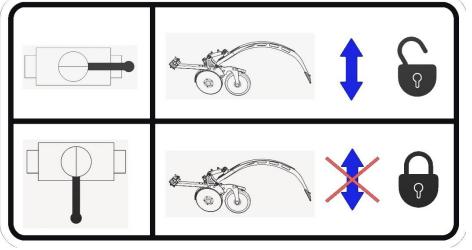

THE PRESSURE MUST ALWAYS BE SET TO 0,2 MPA.

# 15.6 Tramline markers

- The tramline markers are automatically controlled together with the tramline valves.
- The tramline markers can be deactivated using the ball valve on the rear target holder.

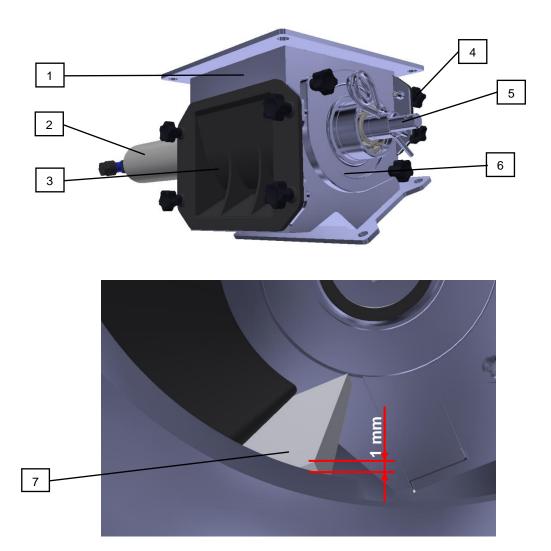

# 16 Farmet dispenser

- Dispenser with roller change system.

| 1 | Body of Farmet dispenser           | 5 | Dispenser shaft                 |
|---|------------------------------------|---|---------------------------------|
| 2 | Drive motor                        | 6 | Side cover with roller mounting |
| 3 | Dispenser front with bottom trowel | 7 | Lower roller trowel             |
| 4 | Dispenser front with top trowel    |   |                                 |

It is necessary to check both trowels of the dispenser rollers every day before work Any sign of deformation and loss of trowel material can lead to inaccurate dose requirements. The trowel can be rotated and used from the other side. In case of damage to both sides, we recommend purchasing a new part. The trowel must extend 1-2mm beyond the edge of the circular opening of the dispenser.

Before each use while standing, it is necessary to check the cleanliness of the roller and the dispenser. The roller must rotate freely in the metering unit. If dispenser gets stuck, there is a risk of breaking the fuse of the dispenser motor.

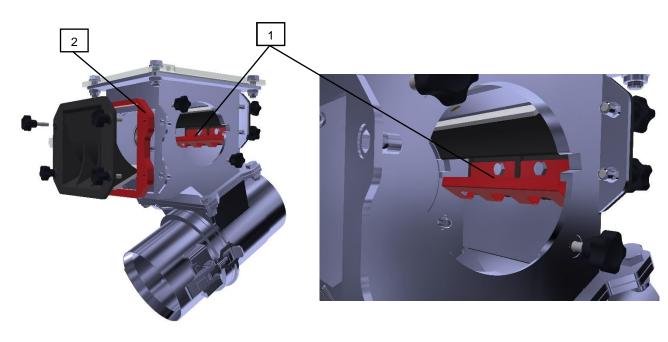

#### 16.1 **Dispenser function test**

- 1. After installing a new roller, the function, centering and smooth running must be checked.
- 2. To start the roller, use the metering fill function or the sowing test.
- The drive motor must run evenly "smoothly". 3.
- Check clutch centering. If running unevenly, the dosing is inaccurate and the motor can be overloaded.
   At the point where the roller cuts, repair them, they must be rearound or returned.
- 6. Loosen the screws on the side covers for the drive motor and roller bearing, and realign the side covers to prevent stress.
- 7. If the drive shaft is bent, it must be aligned or replaced.
- 8. If foreign bodies are stuck between the roller and the metering housing, they must be removed.
- 9. If there is dust or mordant in the roller between the metering discs and the spacer roller, disassemble and clean the roller.

#### 16.2 **Rough seeds**

- For sowing rough seeds (corn, beans. peas, etc.) it is necessary to adjust the metering unit.
- The deflector (1) prevents large seeds from getting stuck between the metering cover and the roller. Failure to install the deflector could damage the roller, metering unit, or motor.
- For very large grains, a large seed adapter (2) can be fitted. This makes it easier for large grains to enter the dispenser and prevents grain damage.
- If necessary, add talc or graphite powder to the seed. Some types of large seeds do not spread well and may not completely fill the roller holes.

Deflector for large seeds 1

Adapter for large seeds

When using the adapter for large seeds, it is necessary to use longer fixing screws L= 30mm (accessories of the adapter frame).

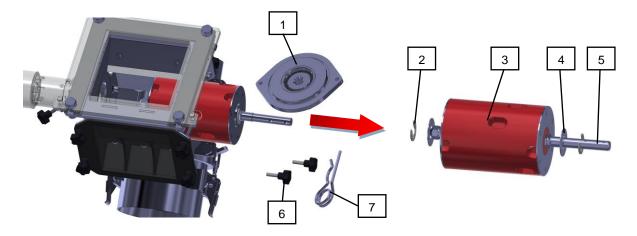

2

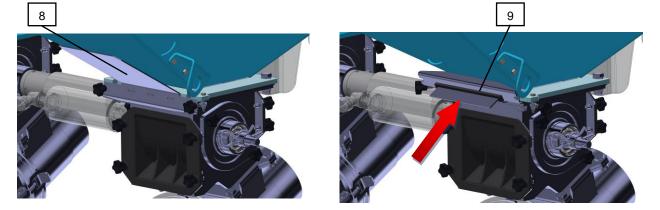

Deflector set with an adapter for large seeds is part of the machine accessories.

# 16.3 Roller replacement

- After selecting the roller according to the table, the roller must be mounted in the metering unit.
  - 1. With the full hopper, slide the slider over the dispenser (9).
  - 2. Remove the screws (6) on the side cover of the metering roller (1).
  - 3. Remove the roller (3) with drive shaft (5) and the side lid (1).
  - 4. Remove the cotter pin (7).
  - 5. Remove the secure ring (2) and cover washers (4)
  - 6. Pull out the shaft (5) roller and mount it on a new roller. Keep the washers (4) on both sides of the roller!
  - 7. Secure the roller (3) with secure rings (2)
  - 8. Insert the roller (3) into the dispenser.
  - 9. Replace the side cover (1) and tighten the screws (6).
  - 10. Secure with a cotter pin (7) (the first hole on the shaft).
  - 11. Pull out the slider (8) and secure him to be sure that dispenser seals.
- After each roller change, the trowel settings and the centered operation of the roller must be checked.

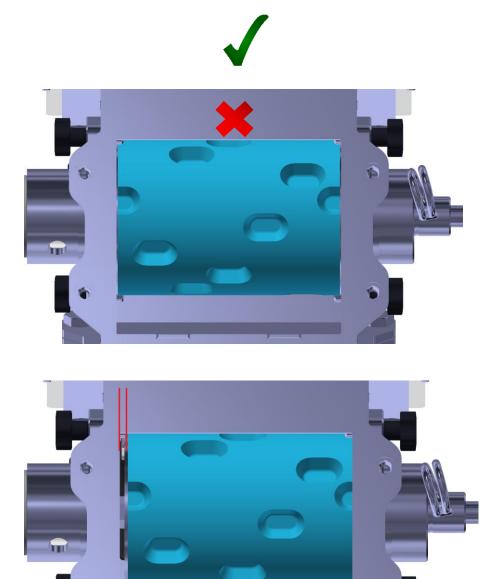

| 1 | Side cover of the dosing roller | 6 | Screws                            |
|---|---------------------------------|---|-----------------------------------|
| 2 | Secure ring                     | 7 | Cotter pin                        |
| 3 | Dosing roller                   | 8 | Closing slider in open position   |
| 4 | Cover pad                       | 9 | Closing slider in closed position |
| 5 | Dosing roller shaft             |   |                                   |

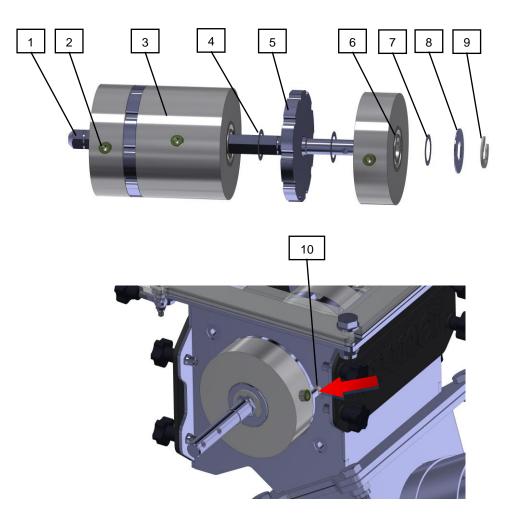

**The cover washers** (4) must be arranged so that the roller in the middle of the dispenser frame after assembly. See picture below.

## 16.4 Rollers for fine seeds

- The fine seed rollers consist of metering discs, spacer rollers and a drive shaft.
- The rollers can be mounted with one or two dosing discs.
- With the two dosing discs on the roller, the spread rate is doubled.
- The dosing disc is available with a dosing volume 3,5 cm<sup>3</sup>, 9 cm<sup>3</sup>.
- When sowing, only the metering discs in the roller rotate. The spacer cylinders are blocked stops on the housing.
- When assembling and disassembling the rollers, the screws (2) must be turned into the recess (10) in the dispenser body.

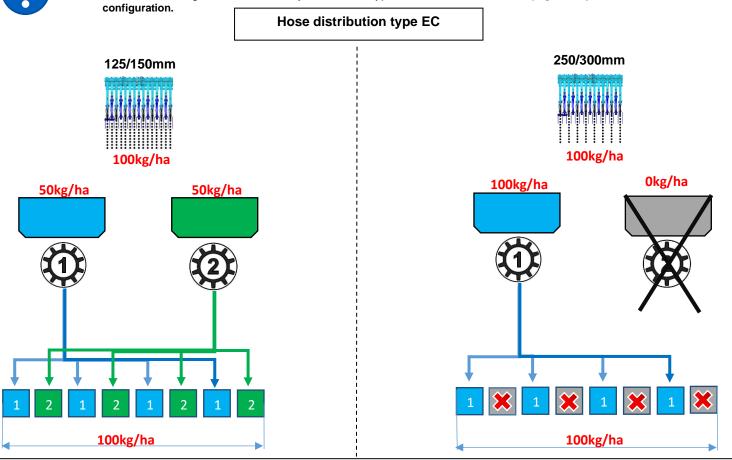

| 1 | Roller shaft                        | 6  | Roller bearing                               |
|---|-------------------------------------|----|--|
| 2 | Anti-rotation screw (locking screw) | 7  | Spacer washer 0,2 mm                         |
| 3 | Spacer washer with lock             | 8  | Cover washer 1 mm                            |

# 17 Sowing test

## 17.1 Hose distribution type

- Before the sowing test, it is necessary to know the type of hose distribution. \*See page 3 for your machine

Hose distribution type HM

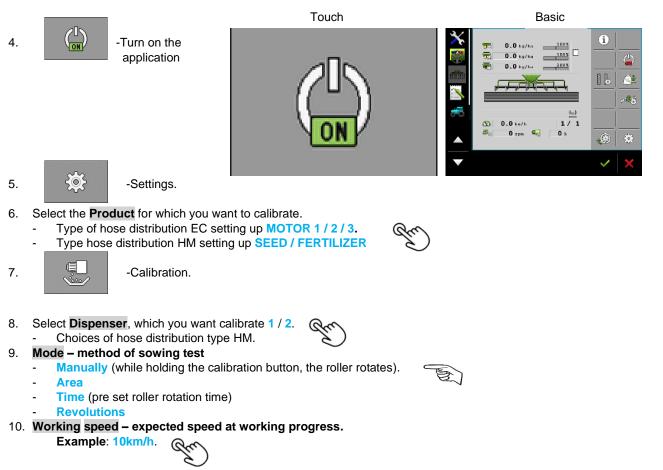

## 17.2 Sowing test

- 1. You will need the designated accessories to perform the calibration test.
  - Scale
  - Bucket
  - Sowing table
- 2. Select the correct roller for the roller metering unit based on the sowing table page 63.
- Check the cleanliness of the dispenser, roller and trowel condition.
   The trowel must reach on the roller page 56.

- 11. Required value sowing dose
  - Example:

One dispenser: Total dispenser requirement 200 kg/ha, set 200 kg/ha. Split-up EC: Requirement 200 kg/ha, set to each dispenser 100 kg/ha. Split-up HM: Requirement 200 kg/ha, set to each dispenser 200 kg/ha.

12. Calibration factor - from the table of calibration factors – page 64.

- Example: 150 g/rev.
- Calibration factor number of grams per revolution of the roller.
- The calibration factor from the table is for guidance only. After the sowing test, the calibration factor is automatically recalculated.
- 13. Hang the calibration bucket.
- 14. Open the slider.

-Fill the roller.

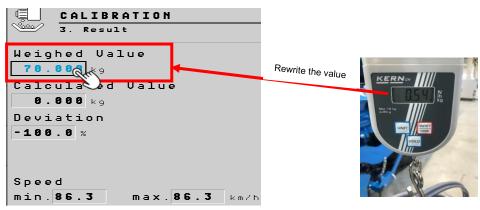

- 16. Pay attention to the selected units on the scaling device.
- 17. Empty the bucket, then hang it on the scale and use the TARE function.
- 18. Hang the calibration bucket on the dispenser.
- 19.

-Activate calibration button.

20. Hold down the calibration button. There must be a large amount of seed in the bucket for accurate calibration.

#### Example: Wheat 4 kg, Rape 0,5 kg

- 21. After releasing the calibration button, weight the amount of seed in the calibration bucket.
- 22. Enter the weight into the terminal. For this entry use a window with the name Acquired value.

- 23. Check that you are comfortable with minimum and maximum speed.
  - If it does NOT COMPLY, replace the roller and repeat the test.
  - Minimum speed is too high= select a smaller roller (ideal speed is from 1,5km/h).
  - Maximum speed is too low= select a larger roller.
  - **Deviation** For a roller dispenser should not be greater than 1 %, for auger metering unit 5 %.
  - If the deviation is too large, confirm the calibration point 17.

and repeat it again from

24. If the range and deviation match, confirm

the calibration

25. Repeat the same calibration procedure for the other dispenser. Working speed range of electric motors is 15-100% (you will find this value on the work screen).

# 17.3 Sowing tables for FARMET dispenser

NOTE: The calibration factors in this table are for guidance only. After the calibration test, the calibration factor is automatically recalculated.

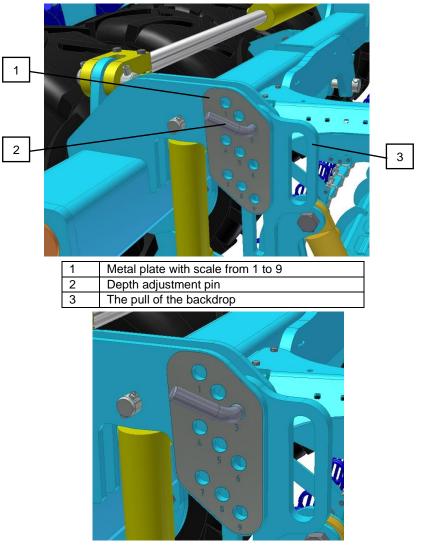

\_

# 18 Settings of seed section

- For optimum seed placement must be observed the following parameters:
  - 1. Required sowing depth
  - 2. The amount of pressure

## 18.1 Sowing depth setting

- The sowing depth is set using the pin (2), which is adjusted in the holes of the setting link (1).
- Each hole corresponds to a certain sowing depth. This only applies when the machine is level.

| 1 | Sowing depth 1 cm | 5 | Sowing depth 5 cm |
|---|-------------------|---|-------------------|
| 2 | Sowing depth 2 cm | 6 | Sowing depth 6 cm |
| 3 | Sowing depth 3 cm | 7 | Sowing depth 7 cm |
| 4 | Sowing depth 4 cm | 8 | Sowing depth 8 cm |
| 9 | Sowing depth 9 cm |   |                   |

The values in the table are for guidance only, they may vary according to soil conditions.

## 18.1.1 Recommended depth

The setting of the sowing depth and the coulter pressure interact.

After each sowing depth change, drive a few meters and check the seed placement depth and the coulter pressure.

| Species          | Recommended sowing depth | Recommended sowing rate |  |  |
|------------------|--------------------------|-------------------------|--|--|
| Spring wheat     | 4-5 cm                   | 220 kg                  |  |  |
| Spring triticale | 4 cm                     | 200 kg                  |  |  |
| Spring barley    | 3-5 cm                   | 200 kg                  |  |  |
| Oat              | 3-5 cm                   | 200 kg                  |  |  |
| Corn             | 5-8 cm                   | 20-70 kg                |  |  |
| Buckwheat        | 3-5 cm                   | 70 kg                   |  |  |
| Peas             | 4-6 cm                   | 250-300 kg              |  |  |
| Spring weasel    | 4-6 cm                   | 120-180 kg              |  |  |
| Broad bean       | 6 cm                     | 180-250 kg              |  |  |
| White lupine     | 6-8 cm                   | 160-180 kg              |  |  |
| Spring rape      | 2-3 cm                   | 3-6 kg                  |  |  |
| White mustard    | 2-3 cm                   | 8-10 kg                 |  |  |
| Poppy seeds      | 1-2 cm                   | 1 kg                    |  |  |
| Sunflower        | 4-6 cm                   | 4-25 kg                 |  |  |
| Meadow clover    | 1-2 cm                   | 15-20 kg                |  |  |
| Lucerne          | 1-2 cm                   | 8-16 kg                 |  |  |

## 18.2 Sowing section pressure setting

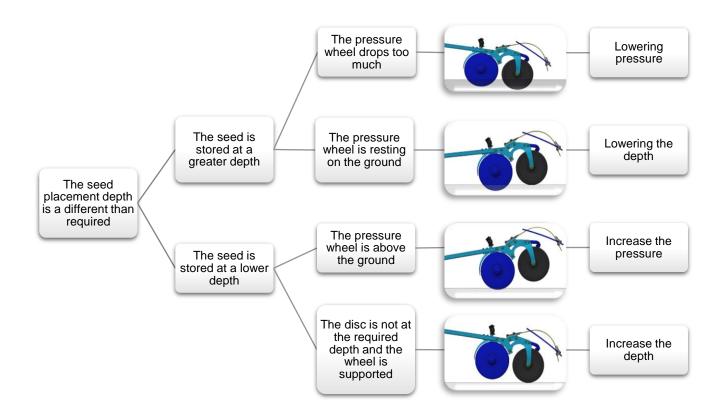

|            | PRESSURE [kg]       |                    |  |  |  |  |
|------------|---------------------|--------------------|--|--|--|--|
| DEPTH [cm] | LIGHT / SANDY SOILS | HEAVY / CLAY SOILS |  |  |  |  |
| 1          | 35                  | 60                 |  |  |  |  |
| 2          | 45                  | 70                 |  |  |  |  |
| 3          | 55                  | 80                 |  |  |  |  |
| 4          | 65                  | 90                 |  |  |  |  |
| 5          | 70                  | 100                |  |  |  |  |
| 6          | 80                  | 110                |  |  |  |  |
| 7          | 90                  | 115                |  |  |  |  |
| 8          | 100                 | 120                |  |  |  |  |

These are indicative recommended values. The correct pressure for a given specific condition may be different and must be adjusted accordingly. In case of dry weather, we recommended increasing the pressure.

- Check the seed placement depth in the field after each change of coulter pressure or sowing depth.Lower the machine to the working position, drive a few meters.
- 2. Check the required seed placement depth and seedbed compaction.

- If the machine is raised, the pressure is too high = lower the pressure.
- The pressure must always be set according to the soil conditions.
- If the pressure is too low, the sowing depth may be unevenly distributed.

## 18.2.1 Increase the pressure

- 1. Apply pressure to **O** and leave it closed.
- 2. Use the wheel to gradually tighten the pressure reducing valve to increase the coulter pressure.
- 3. Again drive a few meters and check the seed placement depth.

### 18.2.2 Lowering the pressure

- 1. For lowering the pressure, raise the seed section to the upper position with
- 2. Releasing the pressure reducing valve reduces the pressure.
- Lower the sowing section to the working position with O.
- 4. Check the reduced pressure on the manometer.
- 5. Again drive a few meters and check the seed placement depth.

# **f**armet

# 18.3 Seed coulters

| 1 | Seed coulter frame | 4 | Pressure wheel scraper |
|---|--------------------|---|------------------------|
| 2 | Coulter discs      | 5 | Pressure wheel         |
| 3 | Comb of the wheel  | 6 | Harrow                 |

- The seed is sown with the coulters.
- The coulter discs (2) cut through the seedbed and expose the seed grove.
- The seed is stored between the discs (2).
- The pressure wheel (5) guides the seed coulter and closes the groove.
- The harrow (6) covers the sowing row with soil and levels the soil.
- The coulter is stored in maintenance-free rubber bearings.

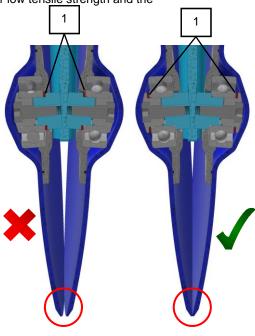

## **Coulter discs**

- The discs are located at the front, are V-shaped for each other for low tensile strength and the formation of a groove for seed placement.

## Disk adjustment

- In case of wear the seed discs, it is necessary to adjust the distance between the discs by changing the location of the spacers.
- All 4 spacers (1) must always be used on each coulter. If all 4 spacers (1) are not used **the coulter will be damaged.**
- The discs must be slightly pretensioned on the blade. However, it must be possible to turn them easily.
- When rotating one disc, the other must be rotated reliable.
- If the discs stop or lock due to incorrect preload, the seed will start to aggregate.

# **l**armet

### 18.3.1 Disc and pressure wheel trowels

- The trowels remove dirt from the discs and pressure wheels.
- Regularly check the function and wear of the trowels.

#### **Disc trowels**

- The trowel has a carbide tip the edges.
- Make sure that the entire trowel rests evenly on the surface of the disc.

#### Pressure wheel scraper

- The distance of the scraper from the wheel must be 1-2 mm.

#### 18.3.2 Pressure wheel

- The pressure wheels provide depth guidance when storing the seed, cover the seed with fine soil and press it against the seed.
- To sow all coulters to the same depth, it is necessary to have the wheels set in the same position.

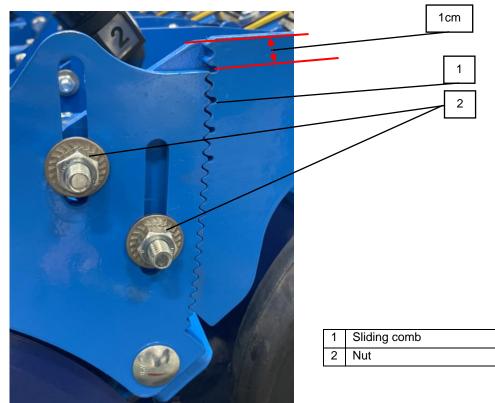

### 18.3.3 Individual countersinking of the coulters

The individual countersinking of the coulters can be adjusted using a sliding comb.

#### Method:

- Loosen nuts (2).
- Adjustment of the countersinking with the sliding comb (1).
- Tighten the nuts (2).

Depth of sowing coulter by 1 cm.

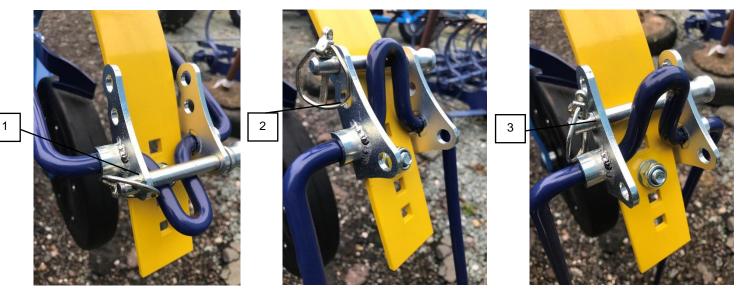

Depth of sowing coulter by 4 cm

#### 18.3.4 Harrows

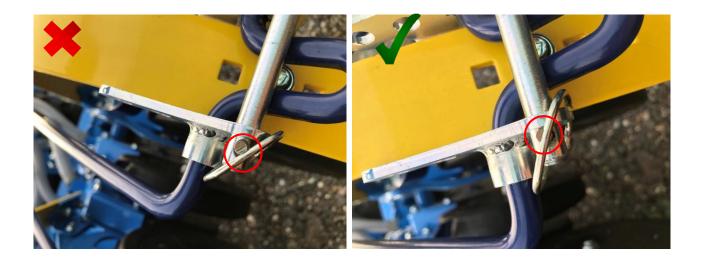

It is possible to change the aggressiveness of the harrows by adjusting the pin. With a large amount crop residues, harrows can be discarded (1).

|   | 1 | Discarded harrow                              |  |  |
|---|---|---|--|--|
| Γ | 2 | The first degree of aggression of the harrow  |  |  |
|   | 3 | The second degree of aggression of the harrow |  |  |

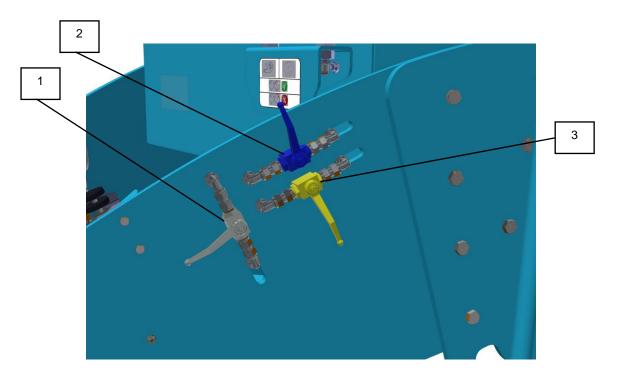

The cotter pin must always be fully secured.

# 19 Fertilizing

- Fertilizer storage is possible in two ways:
  - 1. Fertilization using the preparatory section (disc, chisel)
  - 2. Storage of fertilizer together with seed (FERT S)
- Calibrate the fertilizer dose according to chapter **Sowing test.**
- The piston rod of the fertilization depth can be locked with a gray ball valve (1).

| 1 | Ball valve for disabling fertilization (gray)       |
|---|---|
| 2 | Ball valve for closing the tilt (blue)              |
| 3 | Ball valve for disabling the front section (yellow) |

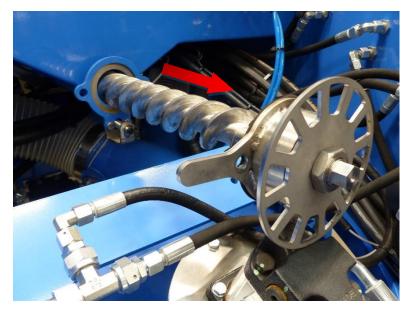

# **farmet**

## 19.1 Auger metering unit of fertilization

- The auger metering unit must always rotate clockwise from the front of the machine.
- The hydraulic motor of the auger metering unit is located under the fertilizer hopper.
- For cleaning, the auger can be extended without disassembly the hydraulic motor.
- This cleaning is carried out before each shutdown of the machine or after the fertilizer application has ended.
- If maintenance is not done properly, the fertilizer inside the auger feeder may harden.
- 1. Loosen and remove the screws of the auger metering unit (1)

2. Slide out the auger metering unit

- 3. Clean the dispenser and the dispenser auger.
- 4. Insert the auger and tighten the screws.

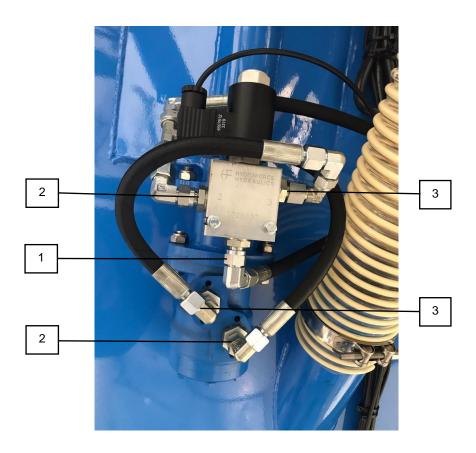

### 19.1.1 Hydraforce fertilizer engine valve

- Provides speed control of the screw feeder.
- To prevent the oil from overheating, it is important to have the oil flow to the fertilizer circuit set correctly.

#### Flow setting to the fertilization circuit:

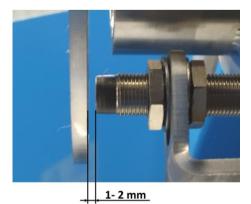

- 1. Increase the oil flow until the required dose is reached at maximum speed.
- 2. Increase the flow value by a reserve 2 %.
- The flow is in the range of 10-20%, depending on the tractor pump.

| 1 | Input branch        |  |
|---|---------------------|--|
| 2 | Return waste branch |  |
| 3 | Regulated branch    |  |

### 19.1.2 Hydraulic dispenser speed sensor

- The sensor is located at the dosing sprocket on the front of the machine hopper.

## 19.1.3 Oil filter for fertilizing hydraulic circuit

- The oil filter has a dirt indicator.
- If the indicator is red, the filter element must be replaced.

#### Filter cartridge replacement:

- 1. There is a hexagon on the bottom of the filter to remove the insert.
- 2. The filter insert is marked m21229.

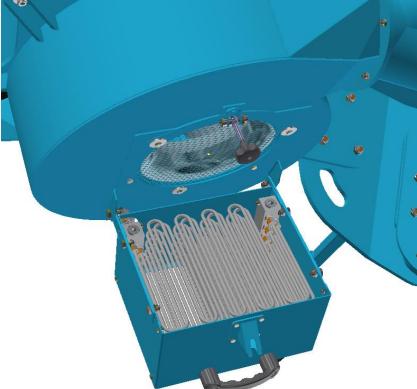

## 19.1.4 Oil cooler

- If the machine is equipped with an oil cooler, it is necessary to clean it, see **Maintenance plan**.
- The oil cooler is located under the drawbar of the machine and is attached to the fan housing.

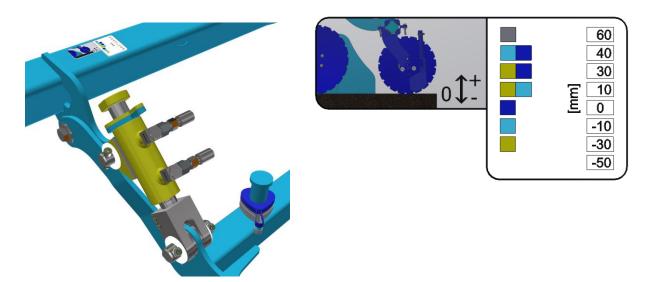

## 19.2 Roller dispenser

The roller fertilizer metering unit is used in the same way as for seed, see chapter Farmet Dispenser.

## 19.3 Disc fertilization

The depth of the fertilizing discs is set by placing the clips on the piston rod, according to the table.

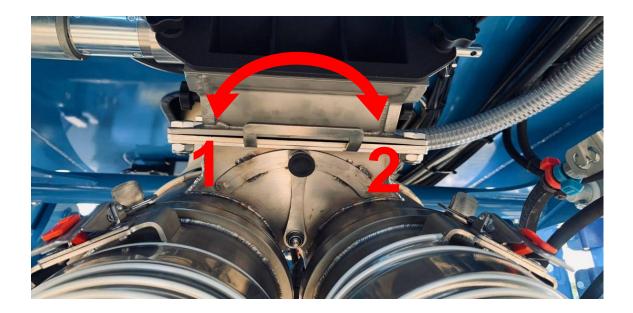

The depth setting of the fertilizer desc section depends on the depth of the front preparation section. If the piston fertilizer is set to 0, the fertilizer depth is the same as the depth of the preparation section.

## 19.4 Storing fertilizer together with seed (Fert S)

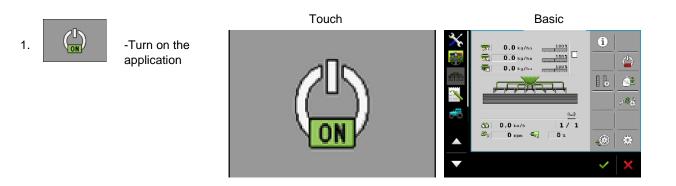

The Ferts S system allows the seed and fertilizer to be stored together at the same time. The seed and fertilizer are replaced in the seed furrow. The fertilizer is fed into the distributor head together with the seed. Using the mixer flap (see picture below) it is possible to set the fertilizer dosing into both chimneys (middle position) or to select position 1 or 2 of fertilizer dosing only into the first or second chimney.

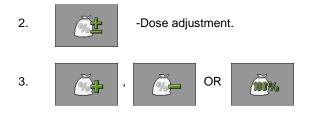

# 20 Adjustin the dose during work

This function is used to adjust the target dose (100%) to a dose in the range of +/-100%, if the engine allows to use in this range.

| Function icon | Meaning   |  |  |  |
|---------------|---|--|--|--|
| <u>~</u>      | Increase the target dose.<br>The target value is increased by a defined value in the product<br>database. |  |  |  |
| <u>M</u>      | Reduces the target dose.  |  |  |  |
| 100%          | Restores the target dose to 100%.   |  |  |  |

4. On the work screen, the change is shown as follows

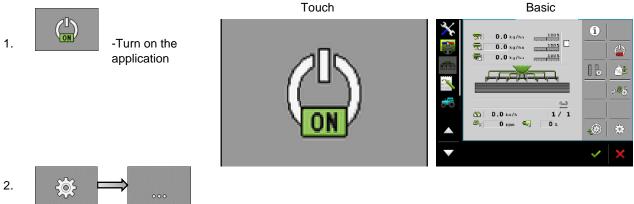

| - |         | 0          | kg⁄ha    |         |          | 120%  |
|---|---------|------------|----------|---------|----------|-------|
| - | The con | ntrol unit | recalcul | ates th | e target | dose. |

- After one minute of working with the changed target dose, the change indicator starts flashing.

#### Emptying the hopper using electronics 21

- The system allows the hopper to be emptied using electric or hydraulic motors and calculates the residual quantity.

- 3. It is necessary to have a selected container that we want to empty.
  - Hopper 1/2/3© ÷ SETTINGS Hopper Hopper 4 Assigned MOTOR 1

2/3 1 Product 

Confirm Dispenser. 5.

1200

4.

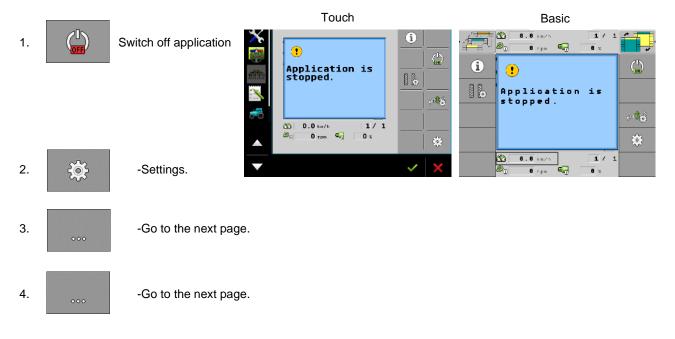

- 7. The calibration buttons are currently used to empty the hopper. When using the emptying function with a hydraulic motor, it is necessary to have an activated circuit for the hydraulic motor.
- 8. When the hopper is empty, press the button

## 22 Working position source

armet

- To switch the sowing on and off, the machine must have information on the working position. In the system it is possible to set which source of working position the system of the machine will use.

#### 5. Working position

- Working position sensor 1 The source is the machines antenna sensor (default setting)
   Tractor The source is the working position from the sensor (CAN) of the tractor, eg tractor arms, GPS
- No / Always in working position the machine is constantly in the working position (deepen)
- 6. After selecting your selected source, use to return to the work screen

## 23 Source speed machinery

#### There are 3 options of the travel speed source:

 Tractor – The source of speed is the tractor. The machine must be connected to the ISOBUS or CAN of the tractor.

2) Work equipment – The source of speed is radar or speed GPS directly on the machine.

If the machine is equipped with radar, set the number of pulses to - 13 500 to 100 meters.

If the machine is equipped with GPS (speed), set the number of pulses to - 13 000 to 100 meters.

3) Simulation - this setting is used to simulate a constant speed (use for service purposes)

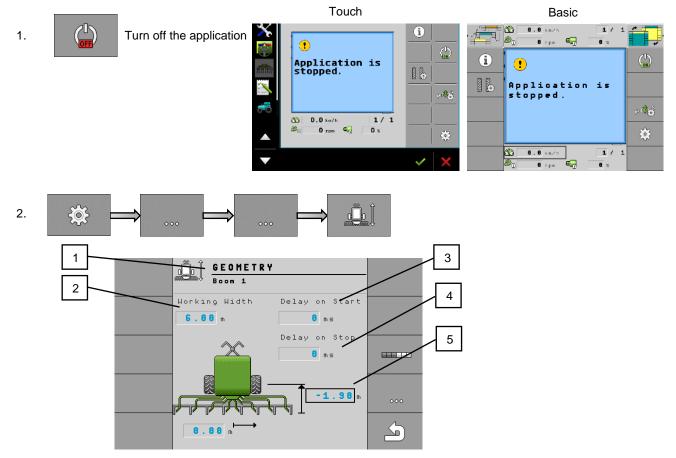

# **farmet**

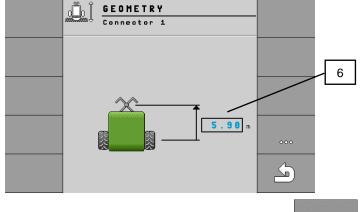

.

## 24 Machine geometry

- This setting is used to define the geometry of the machine relative to the tractor. It is also possible to set the advance and delay of the engine start (sowing).

**Note on the point 5:** If the section is behind the axle axis, the value must always be negative (sowing section), if the section is in front of the axle, the value must be positive (fertilization section).

The button is used to move to the setting of arm 2,3 and connection 1

| 1  | Setting of the hopper 1 (motor 1)       | 4 | Advance engine shutdown 1                      |
|--|---|---|--|
| 2  | Working width of the hopper 1 (motor 1) | 5 | Distance from the axle axis to the seed outlet |
| 3  | Engine start time 1                     | 6 | Distance from the drawbar pin to the axle axis |
| Use the back button to return from the geometry settings |   |   | · ·  |

# 25 Machine lighting

| Function icon | Meaning                                   |  |  |  |
|---------------|---|--|--|--|
|               | Switching work lights on and off.         |  |  |  |
|               | Switching the hopper lighting on and off. |  |  |  |
|               | Switching the beacon on and off.          |  |  |  |

2. After activating your selected function, use to return to the work screen.

# **farmet**

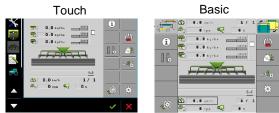

# 26 Controlling sections manually (Section control)

- You can switch sections of your tool using the section control.
- The size of the respective sections that you can switch depends on the type of machine and equipment.
- On the work screen you can see which sections are on and off.

-Turn on the application

-Controlling the sections

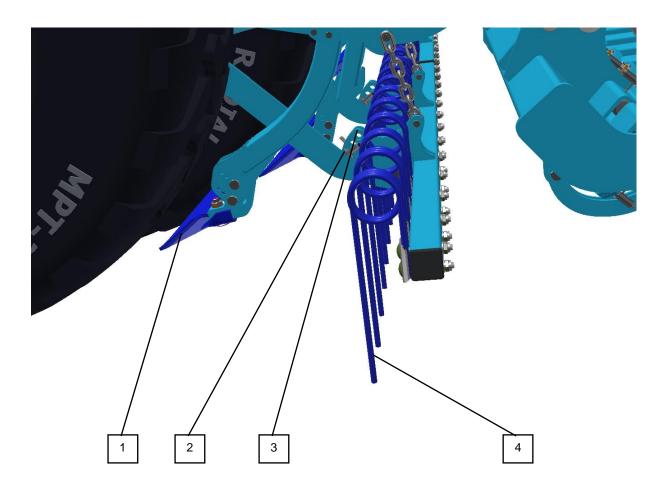

| Function icon | Meaning   |
|---------------|---|
|               | Switching the left half of the machine on and off (motor 1).  |
|               | Switching the right half of the machine on and off (motor 2).   |
|               | Switching off sections from the left side.  |
|               | Switching sections from right to left.  |
|               | Switching off sections from the right side.   |
|               | Switching sections from left to right.  |
|               | Moves the cursor from left to right on the work screen.   |
|               | Moves the cursor from right to left on the work screen.   |
|               | Indicates the part / line that was selected by the cursor for shutdown.<br>Turns on the marked, off section / line. |
| C.            | Turns all marked sections / lines on or off.  |
|               | Turns everything on.  |

# **l**armet

## 27 Adjusting the harrow behind the roller

- Used to spread plant residues in front of the seed coulter.
- For aggression, its aggressiveness can be set.
- The aggressiveness is set using the pin (2), which is adjusted in the holes of the adjusting link (3). It there is a few post-harvested residues in the field, this harrow is set to a steep position, on the contrary, if there are many post-harvested residues in the field such as sowing corn the harrow must be placed to prevent clogging.
- The cultivator only works with its weight and its automatically raised together with the coulters.

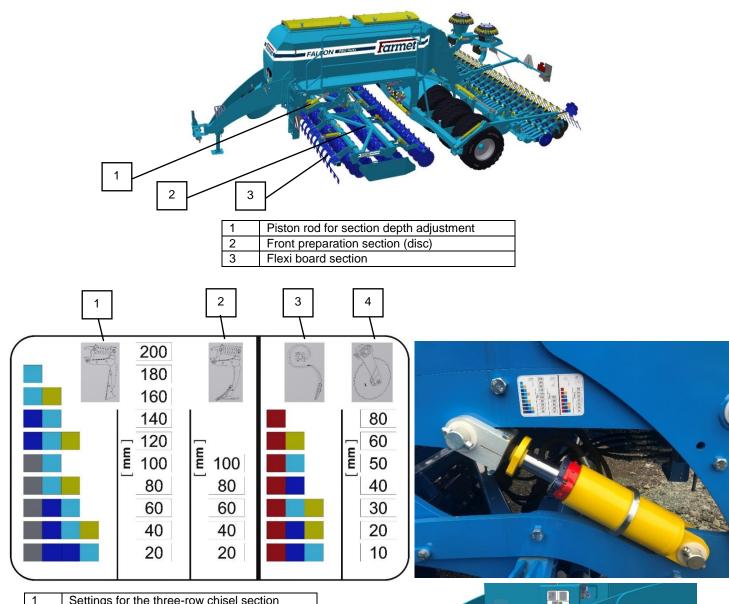

| 1 | Wheel scraper                            |
|---|--|
| 2 | Harrow tilt adjustment pin               |
| 3 | Setting backdrop for changing aggression |
| 4 | Harrowing pen                            |

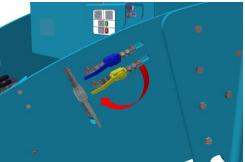

# **f**armet

# 28 Adjusting the depth of the front preparation section

- The front preparation sections are controlled with help  $\bigcirc$  and an open ball valve.

| 1   | Settings for the three-row chisel section |
|---|---|
| 2   | Settings for the coulter section          |
| 3 Settings for the three-row chisel section |   |
| 4   | Settings for a double-row disc section    |

The red clip at the disc section must never be removed. The section is not dimensioned to a depth of more than 80mm and there is a risk of damage!

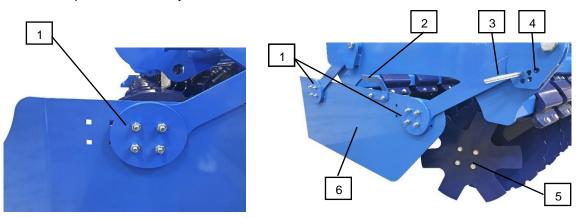

## 28.1 Side deflectors of the front preparation section

- Side deflectors prevent the soil from being ejected through the working width of the machine and level the soil wall created by the external discs.

#### Settings

- The settings must be adapted to the soil conditions.
- No ramparts or furrows may be created between rides.

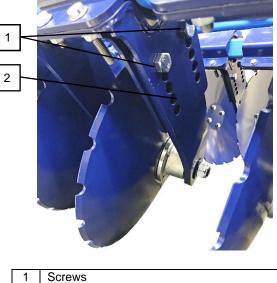

| 1 | Possibility of adjustment in the horizontal direction |
|---|---|
| 2 | Deflector handle                                      |
| 3 | Deflector depth adjustment pin                        |
| 4 | Backdrop for deflector depth adjustment               |
| 5 | Star disc   |
| 6 | Deflector   |

## 28.2 Tractor track cultivators

All Falcon machines with a disc pre-processing section are equipped with tractor track cultivator to loosen the tractor tracks.

#### Depth setting of cultivators:

- Loosen the screws (1).
- Adjust the depth of the cultivators using the holes (2)
- Tighten the screws (1).

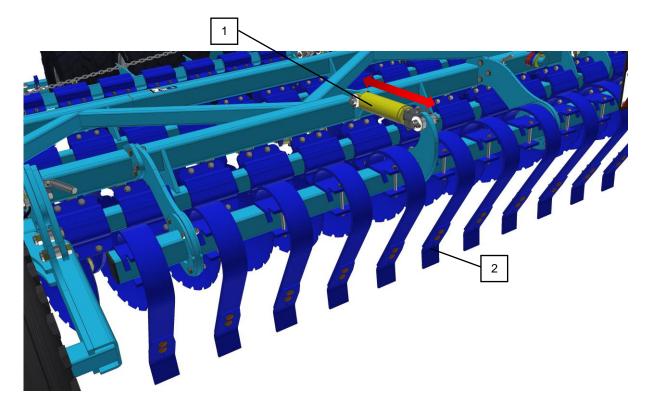

2 Holes for setting the loosening depth

## 28.3 Flexiboard

- Flexi boards are controlled with help  $(\bigcirc)$ .
- It is used to level plowed soils and a lot of lumpy terrain.
- Before the first use, it is always necessary to pressurize the flexi board to the end position to ensure the uniformity of all its sections.
- It is possible to change its depth directly from the tractor cab according to the current conditions.
- The use of a flexi board is not recommended when sowing in mulch.

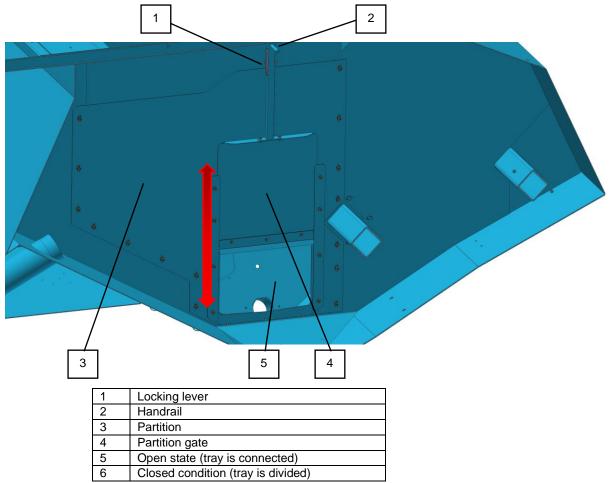

| 1 | Flexi board piston rod | 2 | Flexi board working body |
|---|------------------------|---|--------------------------|

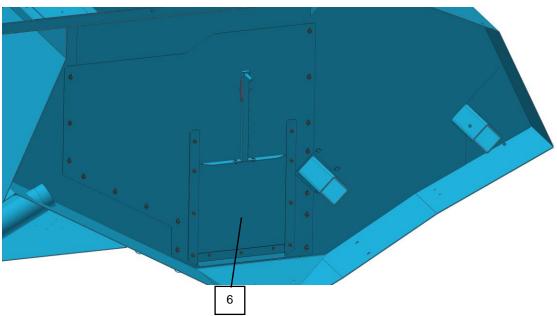

-

# 29 Tray partition

Possibility of dividing the hopper into two separate halves, for sowing two crops or simple connection of both halves of the hopper into one large one, for sowing one crop.

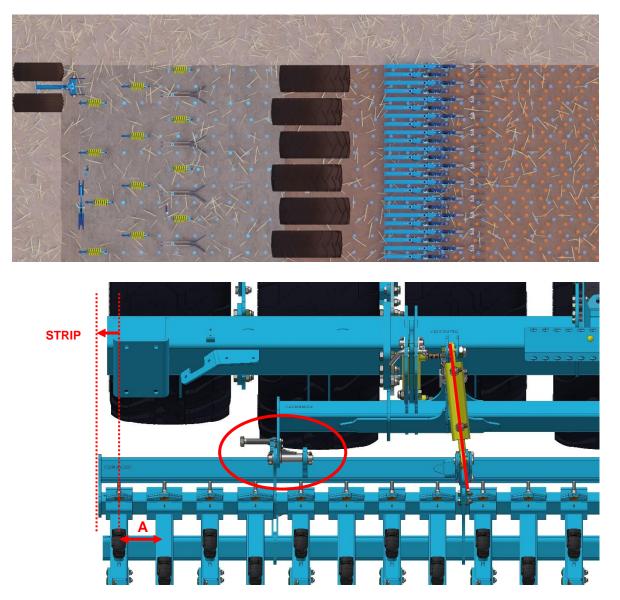

# 30 Sowing section shift

- Possibility of moving the seed coulters to the same spacing as the fertilizer section (sowing with every other seed coulter, the seed is stored in the same line as the fertilizer section).
- 1. Sowing STANDARD, fertilization in the interline.

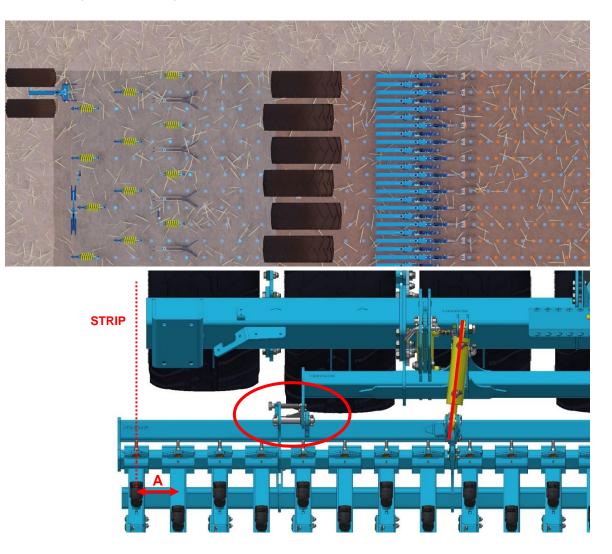

- To readjust the sowing section to STRIP technology, it is necessary to move the sowing section by half the spacing of the seed coulters **A**. This is done using the adjusting screw.
- For the coulter spacing 125 the sowing section is shifted by 62.5 mm, for the 150 mm spacing is by 75 mm. The locking segments are used for this.

2. Sowing STRIP, fertilizing in a row.

#### How to change to STRIP:

- We release and remove the locking segment from the whole section. 1)
- 2) All section displacement pins must be lubricated.
- Insert the screw for moving the section (accessory).
   From the left side, we will gradually start moving the section.
- 5) Refit the locking segment.

TECHNOLOGY STANDARD

#### TECHNOLOGY STRIP

## 31 Brakes

- The machine can be equipped with a pneumatic brake system.
- After parking, the machine must be braked with the parking brake.

- Uncontrolled spontaneous movement of the machine can cause serious injuries or death.
- Park the machine only on level ground with sufficient capacity.

#### Brake connection

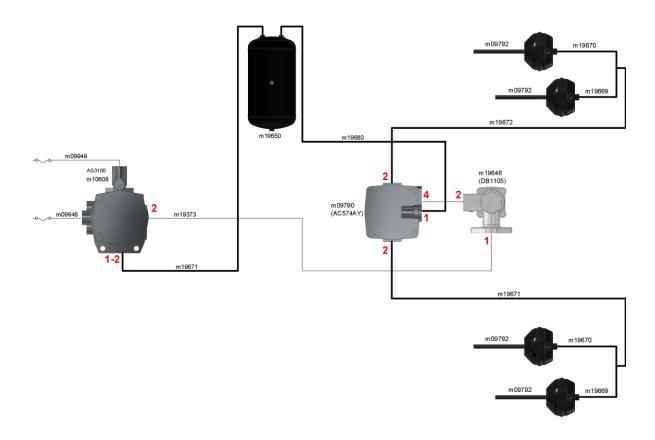

- 1. Connect the control connection head (yellow).
- 2. Connect the filling connection head (red).
- 3. Release the parking brake.

#### **Disconnect brakes**

- 1. Secure with the parking brake.
- 2. Disconnect the filler connection head (red).
- 3. Disconnect the control connection head (yellow).

## 31.1 Air brake

- The air brake is designed as a double-hose brake with a pressure regulator.

## 31.2 Parking brake

Uncontrolled spontaneous movement of the machine can cause serious injuries or death. Park the machine only on level ground with sufficient capacity.

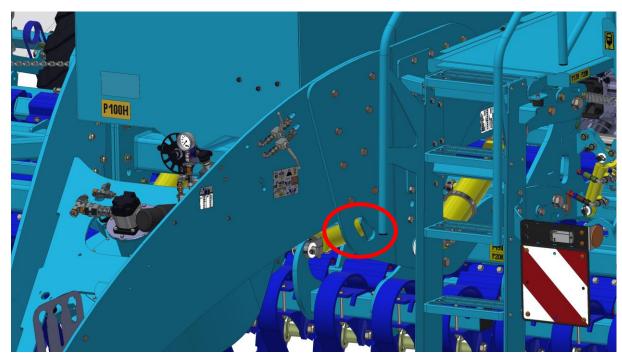

- Before uncoupling, always apply the parking brake and secure the machine against unintentional rolling.
- Always release the parking brake before transport.
- Check the function of the parking brake when attaching the machine.

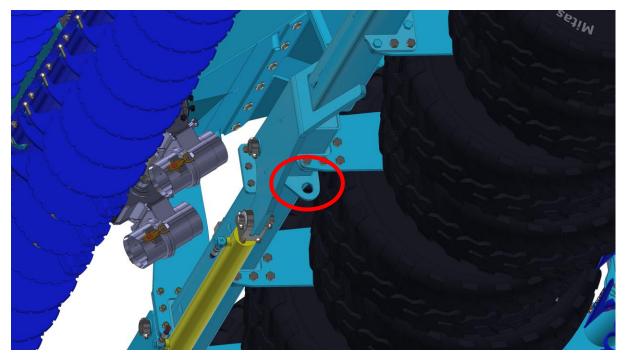

## 32 Hanging the machine on a crane

- For hanging it necessary to use fabric or rubber harnesses with sufficient load capacity. There is a risk of damaging the machine when using the chain.

#### Suspension point on the drawbar

## 34 Machine maintenance and repairs

- Repairs to the machine may only be carried out by a trained person. When leaving the tractor cab, the operator must switch off all hydraulic circuits, appliances on the machine (fan) and the engine, the operator must prevent unauthorized access to the tractor.
- Worn discs are only replaced when the machine is at a standstill (means the machine is stationary and not working)
- If it is necessary to weld during repairs and have the machine connected to the tractor, the supply cables must be disconnected from the alternator and battery.
- Check the tightening of all screw and other mounting connections on the machine before each using of the machine.
- Continuously check the working parts of the machine for wear or replace these worn working parts with new ones.
- Adjustment, cleaning and lubrication of the machine may only be performed when the machine is at standstill (means the machine is stationary and not running).
- When working on the raised machine, use a suitable support device supported in suitable places.
- When adjusting, cleaning, maintaining and repairing the machine, you must secure those parts of the machine that could endanger the operator by falling or other movement.
- Repairs to the hydraulic circuits may only be carried out disassembled and the machine must be laid on the ground by the working units.
- When repairing the hydraulic circuits of the machine, it is first necessary to depressurize the hydraulic circuits of the machine.
- Use only the areas marked with self-adhesive labels with a chain symbol to catch the machine when handling with a lifting device "----".
- In the event of a fault or damage to the machine, switch off the tractor engine immediately and secure the engine against restarting, secure the machine against movement ⇒ only then you can remove the fault.
- Only use original spare parts, suitable tools and protective equipment when repairing the machine.
- Regularly check the prescribed tire pressure of the machine and the condition of the tires. Carry out any tire repairs in a specialist workshop.
  Keep the machine clean.

Do not clean hydraulic cylinders (piston rods), bearing and electronic parts with a high-pressure cleaner or a direct stream of water. Seals and bearing are not waterproof at high pressure.

## 34.1 Maintenance plan

| Generally a machine         Visual inspection of the machine         Monitoring of unwanted sounds, vibrations and excessive wear.         Inspection of key nodes: pins, bearings, cylinders, working bodies         Cleaning the machine         Storage of the machine ideally under the roof.         Record machine raid / season (ha)         Complex visitation         Trame inspection         Do not clean hydraulic cylinders, bearings, electrical and electronic parts with a high-pressure cleaner or a direct str water. Seals and bearings are not waterproof at high pressure.         Widfaulic cystem         Check the function, tightness, fastening and abrasions of all hydraulic components and hoses         Hydraulic hoses – replacement:         Damage hose outer casing (mechanically or swollen)         Fluid leakage (especially at the tip)         Bumps or blisters on the house         Deformed or corroded terminal         Loose end – the hose rotates         Hydraulic hose– replacement:         Hose life exceeded  |   |              | Maintenance plan  |

Brake system

Before the last ride, preserve with antifreeze (approx. 0,1I) without ethanol, use the one recommended by the tractor manufacturer

Secure the machine against movement with wheel chocks

Release the parking brake, bleed the air and close the brake lines

The service and parking brakes must be released during the winter to prevent them from sticking to the brake drum

Lubrication points

Lubricate the lubrication points according to the lubrication schedule, with KP2P-20 Likx grease according to DIN 51 502

PREVENTION means to eliminate the problem planned out of the season without stress and comfortably before a secondary problem, accident or health threat arises.

#### 34.1.1 Lubricant nadling

- Treat lubricants and oils as hazardous waste in accordance with applicable laws and regulations.
- Protect yourself from direct contact with oils and lubricants by using gloves or protective creams.

- Wash oil marks on the skin thoroughly with warm water and soap. Do not clean the skin with petrol, diesel or other solvents.

- Oil or grease is toxic. If you have swallowed oil or grease, see a doctor immediately.

- Protect children from contact with lubricants and oils.

## 34.1.2 Tire pressure

| Load of an empty machine on axle |           |           |               |  |  |  |
|----------------------------------|-----------|-----------|---------------|--|--|--|
| Tire                             | from      | to        | Tire pressure |  |  |  |
|                                  | 0 kg      | 7 920 kg  | 1,5 Bar       |  |  |  |

## 35 Shutting down the machine

#### Shutting down the machine for a longer period of time:

- Park the machine under a roof if possible.
- Park the machine on a level and firm surface with sufficient capacity.
- Before storing the machine, remove dirt and preserve it so that the machine does not suffer any damage during storage. Pay special attention to all marked lubrication points and lubricate them properly according to the lubrication schedule.
- Park the machine in the transport position with the frames folded down. Park the machine on the axle and parking leg, secure the machine against unintentional movement with wheel chocks or other suitable aids.
- The machine must not rest on the discs. There is a risk of damaging the machine's discs.
- Secure the machine against unauthorized access.

## 36 Environmental protection

- Regularly check the hydraulic system for leaks.
- Preventive replacement or repair of hydraulic hoses or other parts of the hydraulic system showing signs of damage before an oil leak occurs.
- Check the condition of the hydraulic hoses and replace them in good time. The service life of hydraulic hoses also includes the time for which they were stored.
- Dispose of oils and fats in accordance with applicable waste laws and regulations.

## 37 End of life machine disposal

- When disposing of the machine, the operator must ensure that steel parts and parts in which hydraulic oil or grease moves are distinguished.
- The operator must cut the steel parts in accordance with the safety regulations and hand them in at a collection point for secondary raw materials. They must proceed with other parts in accordance with the applicable waste laws.

## **38** Service and warranty conditions

## 38.1 Service favor

Service is provided by a sales representative, after consultation with the manufacturer or the manufacturer directly. Spare parts through the sales network by individual dealers throughout the country. Use spare parts only in accordance with the spare parts catalog officially issued by the manufacturer.

## 38.2 Guarantee

#### Machine with registration for MY Farmet, warranty 24 months.

#### Machine without registration, 12 months warranty.

- The manufacturer provides a 24-month warranty on the following machine parts: main frame, axle and drawbar of the machine. The manufacturer provides a 12-month warranty on other parts of the machine. The warranty is provided from the date of sale of the new machine to the final consumer (user).
- The warranty covers hidden defects that appear during the warranty period when the machine is used properly and when the conditions specified in the instructions for use are met.
- The warranty does not apply to wear parts, normal mechanical wear of replaceable parts of working parts (coulters, blades, etc.).
- The warranty does not cover indirect consequences of possible damage, such as reduced service life, etc.
- The warranty is tied to the machine and does not expire with a change of owner.
- The warranty is limited to disassembly and assembly, or replacement or repair of the defective part. The decision whether a defective part will be replaced or repaired belongs to the Farmet contract workshop.
- During the warranty period, repairs or other interventions on the machine may only be carried out by the manufacturers authorized service technician. Otherwise, the warranty will not be recognized. This provision does not apply to the replacement of wear parts.
- The warranty is conditional on the use of original spare parts from the manufacturer.
